Customers can select one of the following transports as part of the subscription request: "HTTP", "HTTPS" - Subscribers specify a URL as part of the subscription registration; notifications will be delivered through an HTTP POST to the specified URL. "Email", "Email-JSON" - Messages are sent to registered addresses as email. Email-JSON sends notifications as a JSON object, while Email sends text-based email. "SQS" - Users can specify an SQS standard queue as the endpoint; Amazon SNS will enqueue a notification message to the specified queue (which subscribers can then process using SQS APIs such as ReceiveMessage, DeleteMessage, etc.). Note that FIFO queues are not currently supported. "SMS" - Messages are sent to registered phone numbers as SMS text messages.
