NEW QUESTION: 2 Welche der folgenden Arten von Tests würden bestimmen, ob ein neues oder modifiziertes System in seiner Zielumgebung betrieben werden kann, ohne andere vorhandene Systeme nachteilig zu beeinflussen?
A. Schnittstellen- / Integrationstest B. Geselligkeitstests C. Paralleles Testen D. Pilotversuch Answer: B
Explanation: Erläuterung: Der Zweck von Geselligkeitstests besteht darin, zu bestätigen, dass ein neues oder modifiziertes System in seiner Zielumgebung betrieben werden kann, ohne vorhandene Systeme nachteilig zu beeinflussen. Dies sollte die Plattform abdecken, die die primäre Anwendungsverarbeitung und Schnittstellen mit anderen Systemen ausführt, sowie Änderungen am Desktop in einer Client-Server- oder Web-Entwicklung. Beim parallelen Testen werden Daten in zwei Systeme - das modifizierte System und ein alternatives System - eingespeist und die Ergebnisse verglichen. Bei diesem Ansatz arbeiten das alte und das neue System über einen bestimmten Zeitraum gleichzeitig und führen dieselben Verarbeitungsfunktionen aus. Die Pilottests finden zunächst an einem Ort statt und werden dann auf andere Orte ausgeweitet. Der Zweck besteht darin, festzustellen, ob das neue System an einem Ort zufriedenstellend funktioniert, bevor es an anderen Orten implementiert wird. Der Schnittstellen- / Integrationstest ist ein Hardware- oder Softwaretest, bei dem die Verbindung von zwei oder mehr Komponenten bewertet wird, die Informationen von einem Bereich zu einem anderen weitergeben. Ziel ist es, einheitlich getestete Module zu verwenden und eine integrierte Struktur aufzubauen.
