NEW QUESTION: 1 **A.** partList.put (key, "Blue Shirt");**B.** partList.putAtomic (key, "Blue Shirt");**C.** partList.putAbsent(key, "Blue Shirt")**D.** partList.putIfNotLocked (key, "Blue Shirt");**E.** if (!partlist.containsKey(key)) partList.put(key, "Blue Shirt");**Answer: E****Explanation:**The containsKey method returns true if this map maps one or more keys to the specified value. So this statement adds a new key if they key is not present.**Reference:** Class ConcurrentHashMap<K,V>

NEW QUESTION: 2 Which of the following statements best describes how the deployment supports closed-loop governance?**A.** A closed-loop governance framework is deployed on a clustered server to monitor the governance activities.**B.** The Metadata Repositories deployed in each environment are chained to share asset usage information.**C.** The Metadata Repository is integrated with the operational systems to link operational metrics to the assets to ensure that the assets perform as intended.**D.** Production systems are integrated to the developer desktops to validate the requirements against the implemented code.**Answer: A,B****Explanation:** Explanation/Reference: SOA Software's Policy Manager and Service Manager combine to form a comprehensive closed-loop SOA Governance solution. Closed loop means: * Defining and managing actionable policies in a governance solution at design-time * Enforcing these policies via deep integration with a management solution at run-time * Auditing that these policies are being enforced * Using industry standards (WS-Policy, WS-MEX) where appropriate for information exchange Closed loop infrastructure enables demand and Value Management * Collect performance, usage and exception statistics at run-time * Track these statistics via the governance solution * Use live, audited information to drive value-based decisions about the effectiveness of different services and organizations * Provide developers with up to the minute information about a service in runtime to inform their decisions about which services to use * Manage supply and demand to ensure maximum efficiency and benefit from SOA The products share a common registry and metadata repository to ensure seamless integration and offer active governance. Closed-loop governance will: * Ensure defined policies are enforced ** When you define a policy for a service you have to KNOW categorically that it is being enforced ** Generate audit trails for run-time and design-time policy compliance * Measure the real-world value of SOA ** Not just theoretical value ** How many applications are using each service, and how much are they using it ** NOT how many applications have asked to use a certain capacity of each service * Manage, monitor and control relationships between consumers and providers ** Enforced contracts ** Capacity planning Change management The diagram below shows the relationships between SOA governance, security and management, demonstrating how SOA Policy Management forms a closed loop of policy, metrics, and audit.
