Rel 2 - 1z0-1112-2 Exam Prep - Pass-for-sure 1z0-1112-2

Do you find that some candidates pass exam easily with Oracle 1z0-1112-2 exam dumps questions, Firstly, PDF Version of 1z0-1112-2 valid dumps questions is convenience for you to read, print and take notes.

After all, what you have learned will help **1z0-1112-2 New Real Exam** you complete your task easily, After your payment, we'll send you a connection of our 1z0-1112-2 study materials in 5 to 10 minutes and you can download immediately without wasting your valuable time.

In addition, you may wonder if our 1z0-1112-2 study dumps become outdated, Photoexperienceacademy also offers 1z0-1112-2 practice test to practice for 1z0-1112-2 exam in real exam scenario.

Whenever you have question about 1z0-1112-2 best questions please feel free to contact us we will try our best to reply you ASAP, Oracle Foundation for Finance and Operations, Financials Exam questions for Best Results.

It's more convenient and proper for those who study at leisure time, What we provide for you is the latest and comprehensive 1z0-1112-2 exam dumps, the safest purchase guarantee and the immediate update of 1z0-1112-2 exam software.

They are the best ever made real exam questions that give the best idea of your Oracle Foundation certification 1z0-1112-2 exam, Our company is a professional certification exam materials provider, **1z0-1112-2 New Real Exam** we have occupied in the field for years, and therefore we have abundant experiences.

We are trying to offer the best high passing-rate 1z0-1112-2 training online materials with low price, Best Oracle 1z0-1112-2 Dumps PDF To Help You Out In Your Exam.

We also offer you free update for one year, and you can get the latest version timely if you buy the 1z0-1112-2 exam dumps from us.

NEW QUESTION: 1 You deploy a new enterprise certification authority (CA) named CA1.You plan to issue certificates based on the User certificate template.You need to ensure that the issued certificates are valid for two years and support autoenrollment.What should you do first?**A.** Modify the Request Handling settings for the CA.**B.** Run the certutil.exe command and specify the resubmit parameter.**C.** Add a new certificate template for CA1 to issue.**D.** Duplicate the User certificate template.**Answer: D**

NEW QUESTION: 2 You specify a nonzero value for the MEMORY_TARGET initialization parameter, but do not set the PGA_AGGREGATE_TARGET or the SGA_TARGET parameters. You restart your database instance. Which statement about the result is true?**A.** The database instance starts, but Automatic Memory Management is disabled.**B.** The database instance starts, and Oracle automatically tunes memory and allocates 60 percent to the SGA and 40 percent to the PGA.**C.** The database instance starts, and Oracle sets the default value of SGA_TARGET to the same value as SGA_MAX_SIZE.**D.** The database instance will not start because you did not specify the PGA_AGGREGATE_TARGET or SGA_TARGET parameter.**Answer: B**Explanation:The database instance starts, and Oracle automatically tunes memory and allocates 60 percent to the SGA and 40 percent to the PGA. In this scenario, you specified a value for the MEMORY_TARGET parameter, but not values for the SGA_TARGET and PGA_AGGREGATE_TARGET parameters. In such a scenario, Oracle automatically tunes memory, but does not use any default values. Instead, at startup, Oracle allocates 60 percent of memory

to the SGA and 40 percent to the PGA. If you set MEMORY_TARGET and PGA_AGGREGATE_TARGET but not SGA_TARGET, SGA_TARGET is set to either the SGA_MAX_SIZE value or the value of MEMORY_TARGET PGA_AGGREGATE_TARGET, whichever is smaller. If you set MEMORY_TARGET and SGA_TARGET but not PGA_AGGREGATE_TARGET, PGA_AGGREGATE_TARGET is set to a value of MEMORY_TARGET - SGA_TARGET. The option that states the database instance starts, and Oracle sets the default value of SGA_TARGET to the same value as SGA_MAX_SIZE is incorrect. Oracle does not set a default value for SGA_TARGET or PGA_AGGREGATE_TARGET in this scenario. The option that states the database instance starts, but Automatic Memory Management is disabled is incorrect because you specified a value for the MEMORY_TARGET initialization parameter. The option that states the database instance will not start because you did not specify the PGA_AGGREGATE_TARGET or SGA_TARGET parameter is incorrect. You can set only the MEMORY_TARGET parameter and leave the PGA_AGGREGATE_TARGET andSGA_TARGET parameters unset, and the database instance will start successfully.

NEW QUESTION: 3 Which one of the built-in Vault users is not automatically added to the safe when it is first created in PVWA?**A.** Auditor**B.** Master**C.** Administrator**D.** Operator**Answer: D**

NEW QUESTION: 4 You plan to use Microsoft Azure SQL Database instances with strict user access control. A user object must:Move with the database if it is run elsewhereBe able to create additional usersYou need to create the user object with correct permissions.Which two Transact-SQL commands should you run? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.**A.** GRANT ALTER ANY USER TO Mary;**B.** CREATE USER Mary WITH PASSWORD = 'strong_password';**C.** CREATE LOGIN Mary WITH PASSWORD = 'strong_password';**D.** ALTER ROLE db_owner ADD MEMBER Mary;**E.** ALTER LOGIN Mary WITH PASSWORD = 'strong_password';**Answer: B,D**Explanation:Explanation/Reference:Explanation: C: ALTER ROLE adds or removes members to or from a database role, or changes the name of a user- defined database role.Members of the db_owner fixed database role can perform all configuration and maintenance activities on the database, and can also drop the database in SQL Server.D: CREATE USER adds a user to the current database.Note: Logins are created at the server level, while users are created at the database level. In other words, a login allows you to connect to the SQL Server service (also called an instance), and permissions inside the database are granted to the database users, not the logins. The logins will be assigned to server roles (for example, serveradmin) and the database users will be assigned to roles within that database (eg.db_datareader, db_bckupoperator).References: https://docs.microsoft.com/en-us/sql/t-sql/statements/alter-role-transact-sql https://docs.microsoft.com/en-us/sql/t-sql/statements/create-user-transact-sql Testlet 2 Background Proseware, Inc, develops and manages a product named Poll Taker. The product is used for delivering public opinion polling and analysis.Polling data comes from a variety of sources, including online surveys, house-to-house interviews, and booths at public events. Polling dataPolling data is stored in one of the two locations:An on-premises Microsoft SQL Server 2019 database named PollingDataAzure Data Lake Gen 2Data in Data Lake is queried by using PolyBasePoll metadataEach poll has associated metadata with information about the poll including the date and number of respondents. The data is stored as JSON.Phone-based pollingSecurityPhone-based poll data must only be uploaded by authorized users from authorized devicesContractors must not have access to any polling data other than their own Access to polling data must set on a per-active directory user basisData migration and loading All data migration processes must use Azure Data FactoryAll data migrations must run automatically during non-business hoursData migrations must be reliable and retry when neededPerformanceAfter six months, raw polling data should be moved to a lower-cost storage solution.DeploymentsAll deployments must be performed by using Azure DevOps. Deployments must use templates used inmultiple environmentsNo credentials or secrets should be used during deploymentsReliabilityAll services and processes must be resilient to a

regional Azure outage.MonitoringAll Azure services must be monitored by using Azure Monitor. On-premises SQL Server performance must be monitored.Testlet 3OverviewCurrent environmentContoso relies on an extensive partner network for marketing, sales, and distribution. Contoso uses external companies that manufacture everything from the actual pharmaceutical to the packaging.The majority of the company's data reside in Microsoft SQL Server database. Application databases fall into one of the following tiers:The company has a reporting infrastructure that ingests data from local databases and partner services.Partners services consists of distributors, wholesales, and retailers across the world. The company performs daily, weekly, and monthly reporting.RequirementsTier 3 and Tier 6 through Tier 8 application must use database density on the same server and Elastic pools in a cost-effective manner.Applications must still have access to data from both internal and external applications keeping the data encrypted and secure at rest and in transit.A disaster recovery strategy must be implemented for Tier 3 and Tier 6 through 8 allowing for failover in the case of server going offline.Selected internal applications must have the data hosted in single Microsoft Azure SQL Databases.Tier 1 internal applications on the premium P2 tierTier 2 internal applications on the standard S4 tierThe solution must support migrating databases that support external and internal application to Azure SQL Database. The migrated databases will be supported by Azure Data Factory pipelines for the continued movement, migration and updating of data both in the cloud and from local core business systems and repositories.Tier 7 and Tier 8 partner access must be restricted to the database only.In addition to default Azure backup behavior, Tier 4 and 5 databases must be on a backup strategy that performs a transaction log backup eve hour, a differential backup of databases every day and a full back up every week.Back up strategies must be put in place for all other standalone Azure SQL Databases using Azure SQL- provided backup storage and capabilities.DatabasesContoso requires their data estate to be designed and implemented in the Azure Cloud. Moving to the cloud must not inhibit access to or availability of data.Databases:Tier 1 Database must implement data masking using the following masking logic:Tier 2 databases must sync between branches and cloud databases and in the event of conflicts must be set up for conflicts to be won by on-premises databases.Tier 3 and Tier 6 through Tier 8 applications must use database density on the same server and Elastic pools in a cost-effective manner.Applications must still have access to data from both internal and external applications keeping the data encrypted and secure at rest and in transit.A disaster recovery strategy must be implemented for Tier 3 and Tier 6 through 8 allowing for failover in the case of a server going offline.Selected internal applications must have the data hosted in single Microsoft Azure SQL Databases.Tier 1 internal applications on the premium P2 tierTier 2 internal applications on the standard S4 tier ReportingSecurity and monitoringSecurityA method of managing multiple databases in the cloud at the same time is must be implemented to streamlining data management and limiting management access to only those requiring access.MonitoringMonitoring must be set up on every database. Contoso and partners must receive performance reports as part of contractual agreements.Tiers 6 through 8 must have unexpected resource storage usage immediately reported to data engineers.The Azure SQL Data Warehouse cache must be monitored when the database is being used. A dashboard monitoring key performance indicators (KPIs) indicated by traffic lights must be created and displayed based on the following metrics:Existing Data Protection and Security compliances require that all certificates and keys are internally managed in an on-premises storage.You identify the following reporting requirements:Azure Data Warehouse must be used to gather and query data from multiple internal and external databasesAzure Data Warehouse must be optimized to use data from a cacheReporting data aggregated for external partners must be stored in Azure Storage and be madeavailable during regular business hours in the connecting regionsReporting strategies must be improved to real time or near real time reporting cadence to improvecompetitiveness and the general supply chainTier 9 reporting must be moved to Event Hubs, queried, and persisted in the same Azure region as thecompany's main officeTier 10 reporting data must be stored in Azure BlobsIssues Team members identify the following issues:Both internal and external client application run

complex joins, equality searches and group-by clauses.Because some systems are managed externally, the queries will not be changed or optimized by Contoso External partner organization data formats, types and schemas are controlled by the partner companiesInternal and external database development staff resources are primarily SQL developers familiar with the Transact-SQL language.Size and amount of data has led to applications and reporting solutions not performing are requiredspeedsTier 7 and 8 data access is constrained to single endpoints managed by partners for accessThe company maintains several legacy client applications. Data for these applications remains isolatedform other applications. This has led to hundreds of databases being provisioned on a per application basis
