NEW QUESTION: 2 You are an administrator with an application running in Oracle Cloud Infrastructure (OCI). The company has a fleet of OCI compute virtual instances behind an load balancer. The load balancer backend set health check API is providing a 'Critical' level warning. You have confirmed that your application is running healthy on the backend servers. What is the possible reason for this 'Critical' warning?
A. A user does not have correct Identity and Access Management (IAM) credentials on the backend servers.
B. The route table associated with the subnet in which the backend server is provisioned does not include the route for the OCI load balancer.
C. The load balancer listener is not configured correctly.
D. The security list associated with the subnet in which the backend server is provisioned does not include the IP range for the source of the health check requests.
Answer: D

NEW QUESTION: 3 Which terminology is being described below? A _____ trust allows resources in your domain (the domain that you are logged on to at the time that you run the New Trust Wizard) to be accessed more quickly by users in another domain (which is nested within another domain tree) in your forest.
A. one-way, outgoing, forest
B. two-way, incoming, forest
C. two-way, incoming, shortcut
D. one-way, outgoing, shortcut
Answer: D Explanation: The direction of the trust is inverse of the direction of the authorization not forest as we're asked for a trust only between 2 domains. a forest trust would provide trust between every single domain of the forest.
