Generally speaking, these three versions of our Manufacturing-Cloud-Professional learning guide can support study on paper, computer and all kinds of eletronic devices, But taking certification exam and getting the certificate [Manufacturing Cloud Accredited Professional Exam](#) are a way to upgrade your ability and prove self-worth, so you have to choose to get the certificate.

NEW QUESTION: 1Your network contains an Active Directory domain named contoso.com. The domain contains four servers on a test network. The servers are configured as shown in the following table. Server1 uses the storage shown in the following table. You perform the following tasks: On Server2, you create an advanced SMB share named Share2A and an applications SMB share named Share2B. On Server3, you create an advanced SMB share named Share3. On Server4, you create an applications SMB share named Share4. You add Server3 and Server4 to a new failover cluster named Clus1. On Clus1, you configure the File Server for general use role, you create a quick SMB share named Share5A, and then you create an applications SMB share named Share5B. You plan to create a failover cluster of two virtual machines hosted on Server1. The clustered virtual machines will use shared .vhdx files. You need to recommend a location to store the shared .vhdx files. Where should you recommend placing the virtual hard disk (VHD)?
A. \Server3Share3
B. \Server4Share4
C. \Server2Share2
D. \Clus1Share5
Answer: D

NEW QUESTION: 2You need to meet the connection requirements for the New York office. What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.
Answer: Explanation: ExplanationBox 1: Create a virtual network gateway and a local network gateway. Azure VPN gateway. The VPN gateway service enables you to connect the VNet to the on-premises network through a VPN appliance. For more information, see Connect an on-premises network to a Microsoft Azure virtual network. The VPN gateway includes the following elements:
* Virtual network gateway. A resource that provides a virtual VPN appliance for the VNet. It is responsible for routing traffic from the on-premises network to the VNet.
* Local network gateway. An abstraction of the on-premises VPN appliance. Network traffic from the cloud application to the on-premises network is routed

through this gateway.* Connection. The connection has properties that specify the connection type (IPSec) and the key shared with the on-premises VPN appliance to encrypt traffic.* Gateway subnet. The virtual network gateway is held in its own subnet, which is subject to various requirements, described in the Recommendations section below.Box 2: Configure a site-to-site VPN connectionOn premises create a site-to-site connection for the virtual network gateway and the local network gateway.Scenario: Connect the New York office to VNet1 over the Internet by using an encrypted connection.

NEW QUESTION: 3The system ready indicator is a visual indication of the status of the Avaya CallPilot system and shows at a glance what is happening with the system.Which statement about the system ready indicator icon is true?**A.** When calls are being processed but some services are not working, the icon flashes a red question mark.**B.** When the Avaya CallPilot server is in normal operation, the icon is white with an exclamation mark.**C.** When status information about the Avaya CallPilot server is currently unavailable the icon flashes a green checkmark.**D.** When calls are not being processed, an X appears on the icon.**Answer: B,D**

NEW QUESTION: 4You have a computer that runs Windows 7.You need to identify the disk, memory, CPU, and network resources that an application is currently using.Which tool should you use?**A.** Component Services**B.** Performance Information and Tools**C.** Resource Monitor**D.** Reliability Monitor**Answer: C**Explanation:Resource Monitor Windows 7 offers an enhanced version of the Resource Monitor tool. Windows 7 Resource Monitor allows you to view information about hardware and software resource use in real time. You can filter the results according to the processes or services that you want to monitor. You can also use Resource Monitor to start, stop, suspend, and resume processes and services, and to troubleshoot unresponsive applications. You can start Resource Monitor from the Processes tab of Task Manager or by entering resmon in the Search box on the Start menu. Resource Monitor includes five tabs: Overview, CPU, Memory, Disk, and Network. The Overview tab, displays basic system resource usage information. The other tabs display information about each specific resource. If you have filtered results on one tab, only resources used by the selected processes or services are displayed on the other tabs. Filtered results are denoted by an orange bar below the title bar of each table.
