NEW QUESTION: 1You are designing a solution to process data from multiple Azure event hubs in near real-time. Once processed, the data will be written to an Azure SQL database. The solution must meet the following requirements: * Support the auditing of resource and data changes. * Support data versioning and rollback. What should you recommend? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. **Answer:** Explanation: Explanation Box 1: Azure Stream Analytics Users can now ingest, process, view, and analyze real-time streaming data into a table directly from a database in Azure SQL Database. They do so in the Azure portal using Azure Stream Analytics. In the Azure portal, you can select an events source (Event Hub/IoT Hub), view incoming real-time events, and select a table to store events. Stream Analytics leverages versioning of reference data to augment streaming data with the reference data that was valid at the time the event was generated. This ensures repeatability of results. Box 2: Replay Reference data is versioned, enabling to always get the same results, even when we "replay" the stream.
