Have a taste: free demo downloading before your decision, [NCS-Core](#) Some of our packages also come with discounts, so you can choose any package according to your needs.

**NEW QUESTION: 1** Sie entwerfen ein Data Warehouse, das auf vier Servern gruppiert wird. Einige der Tabellen im Data Warehouse enthalten vorübergehende Daten, die Sie bei Bedarf neu erstellen können. Das Schema für die Daten ändert sich regelmäßig. Sie müssen den Arbeitsaufwand minimieren, der erforderlich ist, um Schemaänderungen vorzunehmen und diese Änderungen in der Serverfarm bereitzustellen. Administratoren müssen in der Lage sein, die folgenden Schemaänderungen vorzunehmen: \* Hinzufügen von Spalten zu Tabellen \* Entfernen von Spalten aus Tabellen \* Hinzufügen von Tabellen \* Entfernen von Tabellen Änderungen an den transienten Daten werden als Singleton-Operationen ausgeführt. Sie müssen die Daten auf allen Servern in der Serverfarm verfügbar machen. Die Datenübertragung zwischen Servern muss in Echtzeit oder nahezu in Echtzeit erfolgen. Sie müssen jederzeit in der Lage sein, SELECT-Anweisungen für die Daten von jedem Server aus auszuführen. Sie müssen die Umgebung konfigurieren. Welche Technologien sollten Sie implementieren? Wählen Sie zum Beantworten die entsprechenden Technologien im Antwortbereich aus. HINWEIS: Jede richtige Auswahl ist einen Punkt wert. **Answer:** Explanation: Explanation Box 1: Durable in-Memory OLTP Databases containing memory-optimized tables, with or without native compiled stored procedures, are fully supported with Always On Availability Groups. There is no difference in the configuration and support for databases which contain In-Memory OLTP objects as compared to those without. Box 2: Always on Availability groups The Always On availability groups feature is a high-availability and disaster-recovery solution that provides an enterprise-level alternative to database mirroring. Always On availability groups maximizes the availability of a set of user databases for an enterprise. An availability group supports a failover environment for a discrete set of user databases, known as availability databases, that fail over together. An availability group supports a set of read-write primary databases and one to eight sets of corresponding secondary databases. Optionally, secondary databases can be made available for read-only access and/or some backup operations. An availability group fails over at the level of an availability replica. References: <https://docs.microsoft.com/en-us/sql/relational-databases/in-memory-oltp/high-availability-support-for-in-memo> <https://docs.microsoft.com/en-us/sql/database-engine/availability-groups/windows/always-on-availability-groups>

**NEW QUESTION: 2A.** TCPB. global synchronization **C.** MSSD. PMTUDE. windowing **Answer: D**

**NEW QUESTION: 3** In 0.35 hours, 4,200 gallons of water flow over a small dam. At this rate, how many gallons of water will flow over the dam in one hour? **A.** 12,000 **B.** 1,470 **C.** 8,400 **D.** 7,000 **E.** 2,730 **Answer: A**

**NEW QUESTION: 4** CORRECT TEXT Fill in the Blanks \_\_\_\_\_ are the targets or goals that an organization needs to achieve in order to fulfill its purpose as articulated in its mission, mission and value statements. **Answer:** Explanation: Objectives
