NEW QUESTION: 2Give:Which is correct?**A.** Employee takes advantage of composition.**B.** Employee "has-an" Email.**C.** Employee "is-a" LetterPrinter.**D.** Employee has low cohesion.
Answer: D**Explanation:**The relationship between Employee and e-mail is poorly implemented here. There is low cohesion. **Note:**Low cohesion is associated with undesirable traits such as being difficult to maintain, difficult to test, difficult to reuse, and even difficult to understand. Cohesion is decreased if: The functionalities embedded in a class, accessed through its methods, have little in common. Methods carry out many varied activities, often using coarsely-grained or unrelated sets of data. Disadvantages of low cohesion (or "weak cohesion") are: Increased difficulty in understanding modules. Increased difficulty in maintaining a system, because logical changes in the domain affect multiple modules, and because changes in one module require changes in related modules. Increased difficulty in reusing a module because most applications won't need the random set of operations provided by a module.
