NEW QUESTION: 1 Rick works as an Office Assistant for Tech Perfect Inc. The company has a Windows-based network. Rick has to perform the following tasks: Summarize large amounts of data. Analyze numeric data. Answer unexpected questions about data. Which of the following actions will Rick take to accomplish the task? **A.** He will configure form controls. **B.** He will create the accounting template. **C.** He will use stand-alone slicers. **D.** He will create a PivotTable report.
Answer: D Explanation: A PivotTable report is used to summarize large amounts of data, to analyze numerical data, and to answer unexpected questions about data. Answer option B is incorrect. Stand-alone slicers are referenced from Online Analytical Processing (OLAP) Cube functions. These stand-alone slicers can be connected with any PivotTable in future. They can be added by using the slicer button on the Ribbon. They need to be manually linked into grids as required. Answer option D is incorrect. A form control is an original control that is compatible with old versions of Excel, beginning with Excel version 5.0. It is designed for use on XLM macro sheets. It can be used when a user wants to simply interact with cell data without using VBA code and when he wants to add controls to chart sheets. By using form controls, the user can run macros. He can attach an existing macro to a control, or write or record a new macro. These controls cannot be added to UserForms, used to control events, or modified to run Web scripts on Web pages. Answer option A is incorrect. The accounting template is used for numbering months of a financial year to period numbering. It is used to compare month to month, actual v budget, quarter to quarter, year to year variances. It is the initial point for other reports that need the use of months.

NEW QUESTION: 2 You have an Azure subscription that contains the following resources: * a virtual network named VNet1 * a replication policy named ReplPolicy1 * a Recovery Services vault named Vault1 * an Azure Storage account named Storage1 You have an Amazon Web Services (AWS) EC2 virtual machine named VM1 that runs Windows Server You need to migrate VM1 to VNet1 by using Azure Site Recovery. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. **Answer:** Explanation: Explanation: Step 1: Deploy an EC2 virtual machine as a configuration server Prepare source include: Use an EC2 instance that's running Windows Server 2012 R2 to create a configuration server and register it with your

recovery vault. Configure the proxy on the EC2 instance VM you're using as the configuration server so that it can access the service URLs. Step 2: Install Azure Site Recovery Unified Setup. Download Microsoft Azure Site Recovery Unified Setup. You can download it to your local machine and then copy it to the VM you're using as the configuration server. Step 3: Enable replication for VM1. Enable replication for each VM that you want to migrate. When replication is enabled, Site Recovery automatically installs the Mobility service.
