NEW QUESTION: 1次のケーブルのどれがパッチパネルに終端される可能性が最も高いですか？**A. CAT6****B. RG-6****C. シリアル****D. RG-59****Answer: A**

NEW QUESTION: 2Computer evidence at a crime scene is documented with a tag stating who had possession of the evidence at a given time.Which of the following does this illustrate?**A. Record time offset****B. System image capture****C. Order of volatility****D. Chain of custody****Answer: D**
Explanation:Chain of custody deals with how evidence is secured, where it is stored, and who has access to it. When you begin to collect evidence, you must keep track of that evidence at all times and show who has it, who has seen it, and where it has been.Incorrect Answers:A. A system image is a snapshot of what exists. Capturing an image of the operating system in its exploited state can be helpful in revisiting the issue after the fact to learn more about it.B. Record Time Offset - It is quite common for workstation times to be off slightly from actual time, and that can happen with servers as well. Since a forensic investigation is usually dependent on a step-by-step account of what has happened, being able to follow events in the correct time sequence is critical. Because of this, it is imperative to record the time offset on each affected machine during the investigation.C. Act in Order of Volatility is of importance when dealing with multiple issues. Then you should address them in order of volatility (OOV); always deal with the most volatile first.References:Dulaney, Emmett and Chuck Eastton, CompTIA Security+ Study Guide, 6th Edition, Sybex, Indianapolis, 2014, pp. 448,453
