**NEW QUESTION: 2** Which of the following processes is critical for deciding prioritization of actions in a business continuity plan?  
**A.** Business process mapping  
**B.** Vulnerability assessment  
**C.** Business impact analysis (BIA)  
**D.** Risk assessment  
**Answer: C**  
**Explanation:** A business impact analysis (BIA) provides results, such as impact from a security incident and required response times. The BIA is the most critical process for deciding which part of the information system/business process should be given prioritization in case of a security incident. Risk assessment is a very important process for the creation of a business continuity plan. Risk assessment provides information on the likelihood of occurrence of security incidence and assists in the selection of countermeasures. but not in the prioritization. As in choice B, a vulnerability assessment provides information regarding the security weaknesses of the system, supporting the risk analysis process. Business process mapping facilitates the creation of the plan by providing mapping guidance on actions after the decision on critical business processes has been made-translating business prioritization to IT prioritization. Business process mapping does not help in making a decision, but in implementing a decision.
