### NEW QUESTION: 2

各ドロップダウンリストから適切な攻撃を選択して、対応する図解された攻撃にラベルを付けます。

手順：攻撃は1回しか使用できず、選択するとドロップダウンリストから消えます。シミュレーションが完了したら、[完了]ボタンを選択して送信してください。 **Answer:** Explanation: Explanation 1: Spear phishing is an e-mail spoofing fraud attempt that targets a specific organization, seeking unauthorized access to confidential data. As with the e-mail messages used in regular phishing expeditions, spear phishing messages appear to come from a trusted source. Phishing messages usually appear to come from a large and well-known company or Web site with a broad membership base, such as eBay or PayPal. In the case of spear phishing, however, the apparent source of the e-mail is likely to be an individual within the recipient's own company and generally someone in a position of authority. 2: The Hoax in this question is designed to make people believe that the fake AV (anti-virus) software is genuine. 3: Vishing is the act of using the telephone in an attempt to scam the user into surrendering private information that will be used for identity theft. The scammer usually pretends to be a legitimate business, and fools the victim into thinking he or she will profit. 4: Phishing is the act of sending an email to a user falsely claiming to be an established legitimate enterprise in an attempt to scam the user into surrendering private information that will be used for identity theft. Phishing email will direct the user to visit a website where they are asked to update personal information, such as a password, credit card, social security, or bank account numbers, that the legitimate organization already has. The website, however, is bogus and set up only to steal the information the user enters on the page. 5: Similar in nature to e-mail phishing, pharming seeks

to obtain personal or private (usually financial related) information through domain spoofing. Rather than being spammed with malicious and mischievous e-mail requests for you to visit spoof Web sites which appear legitimate, pharming 'poisons' a DNS server by infusing false information into the DNS server, resulting in a user's request being redirected elsewhere. Your browser, however will show you are at the correct Web site, which makes pharming a bit more serious and more difficult to detect. Phishing attempts to scam people one at a time with an e-mail while pharming allows the scammers to target large groups of people at one time through domain spoofing. References:

**NEW QUESTION: 3** You work for a company which uses SQL Server 2008. You are the administrator of the company database and in charge of three SQL Server 2008 instances. All the instances run on their independent server. The three instances are respectively named InstanceA, InstanceB, and InstanceC. Between InstanceA and InstanceB, you configure a mirroring mission-critical database. InstanceA currently acts as the Principal and InstanceC acts as the witness. You intend to apply a patch to both servers as soon as possible, the patch needs to restart the server. You must make sure that the database is online on the partner that currently does not apply the patch and during this time the database does not failover to the other partner. So what action should you perform to achieve this goal? **A.** First, you should remove the mirroring session. Second you apply the patch to the server that runs InstanceB. Third, you should apply the patch to the server that runs InstanceA. At last re-establish the mirroring session. **B.** First, you should apply the patch to the server that runs InstanceB. Second you failover the mirroring session manually. At last apply the patch to the server that runs InstanceA. **C.** First, you should apply the patch to the server that runs InstanceC. Second you apply the patch to the server that runs InstanceA. **D.** First, you should stop the mirroring session. Second you apply the patch to the server that runs InstanceB. Third, you should resume the mirroring session. Fourth, you should manually failover the mirroring session. At last, you should apply the patch to the server that runs InstanceA. **Answer: D** Explanation: 1. Status= SUSPENDED: The mirror copy of the database is not available. The principal database is running without sending any logs to the mirror server, a condition known as running exposed. This is the state after a failover. 2. Patch the target server. 3. resume the mirroring, in order to have the SYNCHRONIZED status. 4. Make a failover from the source Instance A to InstanceB, the already patched server. 5. Apply the patch to the Instance A
