NEW QUESTION: 1What are typical characteristics of the Desktop Assistant cache? Note: There are 3 correct answers to this question.**A.** When a new Desktop Assistant version is installed, the cache must be deleted manually on every end user machine.**B.** Only requested files will be cached.**C.** The lesson.js date is the base for the cache update.**D.** It reduces the network load.**E.** The update frequency cannot be changed.**Answer: A,D,E**

NEW QUESTION: 2**A.** Option **B****B.** Option **C****C.** Option **E****D.** Option **D****E.** Option **A****Answer: A,D,E**
Explanation:**A**D: The value for the disk group COMPATIBLE.ASM attribute determines the minimum software version for an Oracle ASM instance that can use the disk group. This setting also affects the format of the data structures for the Oracle ASM metadata on the disk.**B**: The value for the disk group COMPATIBLE.RDBMS attribute determines the minimum COMPATIBLE database initialization parameter setting for any database instance that is allowed to use the disk group. Before advancing the COMPATIBLE.RDBMS attribute, ensure that the values for the COMPATIBLE initialization parameter for all of the databases that access the disk group are set to at least the value of the new setting for COMPATIBLE.RDBMS.For example, if the COMPATIBLE initialization parameters of the databases are set to either 11.1 or 11.2, then COMPATIBLE.RDBMS can be set to any value between 10.1 and 11.2 inclusively.**Not E**:/The value for the disk group COMPATIBLE.ADVM attribute determines whether the disk group can contain Oracle ASM volumes. The value must be set to 11.2 or higher. Before setting this attribute, the COMPATIBLE.ASM value must be 11.2 or higher. Also, the Oracle ADVM volume drivers must be loaded in the supported environment./ You can create an Oracle ASM Dynamic Volume Manager (Oracle ADVM) volume in a disk group. The volume device associated with the dynamic volume can then be used to host an Oracle ACFS file system.The compatibility parameters COMPATIBLE.ASM and COMPATIBLE.ADVM must be set to 11.2 or higher for the disk group.**Note**:* The disk group attributes that determine compatibility are COMPATIBLE.ASM, COMPATIBLE.RDBMS. and COMPATIBLE.ADVM. The COMPATIBLE.ASM and COMPATIBLE.RDBMS attribute settings determine the minimum Oracle Database software version numbers that a system can use for Oracle ASM and the database instance types respectively. For example, if the

Oracle ASM compatibility setting is 11.2, and RDBMS compatibility is set to 11.1, then the Oracle ASM software version must be at least 11.2, and the Oracle Database client software version must be at least 11.1. The COMPATIBLE.ADVANCED attribute determines whether the Oracle ASM Dynamic Volume Manager feature can create a volume in a disk group.

NEW QUESTION: 3 Which connect on can you use to create a new replicative data model? Please choose the correct answer. Response: **A. Import data connection B. Direct connection C. Cloud connection D. Universe connection Answer: A**
