NEW QUESTION: 1What is the difference between the commands test -e path and test -f path?
A. They are equivalent options with the same behavior.**B.** The -f option tests for a regular file. The -e option tests for an empty file.**C.** The -f option tests for a regular file. The -e option tests for an executable file.**D.** Both options check the existence of the path. The -f option also confirms that it is a regular file.**Answer: D**

NEW QUESTION: 2You are deploying a VXLAN using EVPN signaling overlay network. PE1 and PE2 are multihomed to the connected CE device. You notice that the traffic is not load-balancing as expected. Referring to the exhibit, which two actions will solve this problem? (Choose two.)
A. Set the ESI on PE2 to 00:11:11:11:11:11:11:11:11:11.**B.** Set the ESI on both devices to 00:00:00:00:00:00:00:00:00:00.**C.** Set the route distinguisher on PE2 to 11.11.11.11:100.**D.** Set the LACP system ID on PE2 to 00:00:00:00:00:01.**Answer: A,D**

NEW QUESTION: 3An organization is using a centralized DHCP server for all IP phones. However, when the IP phones are powered up, the phones are unable to obtain an IP address. Which CLI command should be in the router configuration to ensure that the IP phones are able to reach the DHCP server?
A. router(config)# ip helper-address
B. router(config-if)# helper-address
C. router(config)# helper-address
D. router(config-if)# ip helper-address
Answer: D
Explanation:Configuring IP Helper Addresses
To configure the helper address, identify the router interface that will receive the broadcasts for UDP services. In interface configuration mode, use the ip helper-address command to define the address to which UDP broadcasts for services should be forwarded. By default, the ip helper-address command forwards the eight UDP services listed
What if Company XYZ needs to forward requests for a service not on this list? The Cisco IOS software provides the global configuration command ip forward-protocol to allow an administrator to forward any UDP port in addition to the default eight. To forward UDP on port 517, use the global configuration command ip forward-protocol udp 517. This command is used not only to add a UDP port to the default eight, but also to subtract an unwanted service from the default group. When forwarding DHCP, TFTP, and DNS without forwarding Time, TACACS, and NetBIOS, the Cisco IOS software requires that the router be

configured according to the syntax shown in Example 2-5. Example 2-5 Forwarding UDP Services
RTA(config-if)#ip helper-address 192.168.1.254 RTA(config-if)#exit RTA(config)#ip forward-protocol udp 517 RTA(config)#no ip forward-protocol udp 37 RTA(config)#no ip forward-protocol udp 49 RTA(config)#no ip forward-protocol udp 137 RTA(config)#no ip forward-protocol udp 138

NEW QUESTION: 4 You are a global retailer that has a product that is carried in multiple countries. The primary product description that was added for the item contains a superlative that cannot legally be visible to an end consumer in all countries. What option do you have for addressing this issue?
A. Utilize the translation capabilities in RMS.
B. Utilize the local item description functionality.
C. Utilize an item/location trait.
D. Utilize a user-defined attribute.
Answer: A
