NEW QUESTION: 3Your network contains an on-premises Active Directory domain named contoso.com that is synced to a Microsoft Azure Active Directory (Azure AD) tenant. The on-premises network contains a file server named Server1. Server1 has a share named Share1 that contains company documents. Your company purchases a Microsoft 365 subscription. You plan to migrate data from Share1 to Microsoft 365. Only data that was created or modified during the last three months will be migrated. You need to identify all the files in Share1 that were modified or created during the last 90 days. What should you use?**A.** Resource Monitor**B.** Server Manager**C.** Microsoft SharePoint Migration Tool**D.** Usage reports from the Microsoft 365 admin center**Answer: C**
Explanation: You can use the Microsoft SharePoint Migration Tool to migrate files from a file server to SharePoint Online. The Microsoft SharePoint Migration Tool has a number of filters you can use to define which files will be migrated. One filter setting is "Migrate files modified after". This setting will only migrate files modified after the selected date. The first phase of a migration is to perform a scan of the source files to create a manifest of the files that will be migrated. You can use this manifest to identify all the files in Share1 that were modified or created during the last 90 days. References:
