NEW QUESTION: 1HOTSPOT**Answer:** Explanation:Explanation:Scenario:Box 1, Processing option:DefaultProcess Default detects the process state of database objects, and performs processing necessary to deliver unprocessed or partially processed objects to a fully processed state.If you change a data binding, Process Default will do a Process Full on the affected object. Note: Processing Method This setting controls whether the deployed objects are processed after deployment and the type of processing that will be performed. There are three processing options:Default processing (default)Full processingNoneBox 2, Transactional deployment: FalseIf this option is False, Analysis Services deploys the metadata changes in a single transaction, and deploys each processing command in its own transaction.Scenario: The CustomerAnalysis data model will contain a large amount of data and needs to be shared with other developers even if a deployment fails. Each time you deploy a change during development, processing takes a long time.
