NEW QUESTION: 2 Using WS-AtomicTransaction you wrap 3 SOAP-based Web services in a single transaction. When it is time to vote on the outcome of the transaction, 2 of the services vote to commit the changes made during the transaction, but a vote from the third service is not received. What will happen? Select the correct answer. **A.** The changes are committed because the transaction is considered successful as long as no Abort votes are received. **B.** The changes are aborted because a transaction can only be considered successful when more than 2 Commit votes are received. **C.** The changes are committed because the transaction is considered successful as long as one Commit vote is received. **D.** The changes are rolled back because the transaction is considered unsuccessful when there is a missing vote. **Answer: D**

NEW QUESTION: 3 You have a server named Server1 that runs Windows Server 2016. Server1 has the Web Application Proxy role service installed. You are publishing an application named App1 that will use Integrated Windows authentication as shown in the following graphic. Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. **Answer:** Explanation: Explanation Publish an Integrated Windows authenticated-based Application for Web Browser Clients Step 1: (configure the Backend server SPN - see first bulleted item below) Before you begin, make sure that you have done the following: Step 2: http://server2.contoso.com/publish/app1 Use the same URL as the backend server URL. Web Application Proxy can translate host names in URLs, but cannot translate path names. Therefore, you can enter different host names, but you must enter the same path name. For example, you can enter an external URL of https://apps.contoso.com/app1/ and a backend server URL of http://app-server/app1/.

However, you cannot enter an external URL of <https://apps.contoso.com/app1/> and a backend server URL of <https://apps.contoso.com/internal-app1/>.
