NEW QUESTION: 1 On an MPLS L3VPN, which two tasks are performed by the PE router? (Choose two.)
A. It exchanges VPNv4 routes with other PE routers.
B. It typically exchanges iBGP routing updates with the CE device.
C. It exchanges VPNv4 routes with CE devices.
D. It distributes labels and forwards labeled packets.
E. It forwards labeled packets between CE devices.
Answer: A,D
Explanation: Explanation/Reference: Explanation: MPLS VPN functionality is enabled at the edge of an MPLS network. The PE router performs these tasks: Exchanges routing updates with the CE router Translates the CE routing information into VPN version 4 (VPNv4) routes Exchanges VPNv4 routes with other PE routers through the Multiprotocol Border Gateway Protocol (MP-BGP) A PE router binds a label to each customer prefix learned from a CE router and includes the label in the network reachability information for the prefix that it advertises to other PE routers. When a PE router forwards a packet received from a CE router across the provider network, it labels the packet with the label learned from the destination PE router. When the destination PE router receives the labeled packet, it pops the label and uses it to direct the packet to the correct CE router. Label forwarding across the provider backbone is based on either dynamic label switching or traffic engineered paths. A customer data packet carries two levels of labels when traversing the backbone Reference.

NEW QUESTION: 2 **Answer:** Explanation: Explanation Box 1: address Box 2: "http://Service1/EmployeeService.svc" In WCF, an EndpointAddress models an endpoint reference (EPR) as defined in the WS-Addressing standard. The address URI for most transports

has four parts. For example, this URI, "

http://www.fabrikam.com:322/mathservice.svc/secureEndpoint" has the following four parts:

Scheme: http: Machine: www.fabrikam.com (Optional) Port: 322 Path:

/mathservice.svc/secureEndpoint

3: The names and namespaces of the .NET types in the definition of contracts and operations are significant when contracts are converted into WSDL and when contract messages are created and sent. Therefore, it is strongly recommended that service contract names and namespaces are explicitly set using the Name and Namespace properties of all supporting contract attributes such as the ServiceContractAttribute, OperationContractAttribute, DataContractAttribute, DataMemberAttribute, and other contract attributes.
