**NEW QUESTION: 1**You need to manage different names for contacts, such as legal name, nick name, and so on. You try to add the field "All Names" in the Details Page Standard Layout in your Oracle Sales Cloud R12 instance. However, the Layout is read-only and you cannot edit it therefore. Why?**A.** Your user does not have administrator privileges.**B.** Your Profile Options settings are wrong.**C.** You missed deselecting the Read-Only flag for the layout.**D.** The Standard Layout cannot be modified in R12. You need to make a copy.**Answer: C**

**NEW QUESTION: 2**Case Study: 6 - TerramEarth Company Overview TerramEarth manufactures heavy equipment for the mining and agricultural industries. About 80% of their business is from mining and 20% from agriculture. They currently have over 500 dealers and service centers in 100 countries. Their mission is to build products that make their customers more productive. Solution Concept There are 20 million TerramEarth vehicles in operation that collect 120 fields of data per second. Data is stored locally on the vehicle and can be accessed for analysis when a vehicle is serviced. The data is downloaded via a maintenance port. This same port can be used to adjust operational parameters, allowing the vehicles to be upgraded in the field with new computing modules. Approximately 200,000 vehicles are connected to a cellular network, allowing TerramEarth to collect data directly. At a rate of 120 fields of data per second with 22 hours of operation per day, TerramEarth collects a total of about 9 TB/day from these connected vehicles. Existing Technical Environment TerramEarth's existing architecture is composed of Linux and Windows-based systems that reside in a single U.S. west coast based data center. These systems gzip CSV files from the field and upload via FTP, and place the data in their data warehouse. Because this process takes time, aggregated reports are based on data that is 3 weeks old. With this data, TerramEarth has been able to preemptively stock replacement parts and reduce unplanned downtime of their vehicles by 60%. However, because the data is stale, some customers are without their vehicles for up to 4 weeks while they wait for replacement parts. Business Requirements Decrease unplanned vehicle downtime to less than 1 week. \* Support the dealer network with more data on how their customers use their equipment to better \* position new products and services Have the ability to partner with

different companies - especially with seed and fertilizer suppliers\* in the fast-growing agricultural business - to create compelling joint offerings for their customers. Technical Requirements Expand beyond a single datacenter to decrease latency to the American Midwest and east\* coast. Create a backup strategy.\* Increase security of data transfer from equipment to the datacenter.\* Improve data in the data warehouse.\* Use customer and equipment data to anticipate customer needs.\* Application 1: Data ingest A custom Python application reads uploaded datafiles from a single server, writes to the data warehouse. Compute: Windows Server 2008 R2\* - 16 CPUs- 128 GB of RAM- 10 TB local HDD storage Application 2: Reporting An off the shelf application that business analysts use to run a daily report to see what equipment needs repair. Only 2 analysts of a team of 10 (5 west coast, 5 east coast) can connect to the reporting application at a time. Compute: Off the shelf application. License tied to number of physical CPUs\* - Windows Server 2008 R2- 16 CPUs- 32 GB of RAM- 500 GB HDD Data warehouse: A single PostgreSQL server\* - RedHat Linux- 64 CPUs- 128 GB of RAM- 4x 6TB HDD in RAID 0 Executive Statement Our competitive advantage has always been in the manufacturing process, with our ability to build better vehicles for lower cost than our competitors. However, new products with different approaches are constantly being developed, and I'm concerned that we lack the skills to undergo the next wave of transformations in our industry. My goals are to build our skills while addressing immediate market needs through incremental innovations. For this question, refer to the TerraEarth case study. Considering the technical requirements, how should you reduce the unplanned vehicle downtime in GCP? **A.** Use BigQuery as the data warehouse. Connect all vehicles to the network and upload gzip files to a Multi-Regional Cloud Storage bucket using gcloud. Use Google Data Studio for analysis and reporting. **B.** Use Cloud Dataproc Hive as the data warehouse. Directly stream data into partitioned Hive tables. Use Pig scripts to analyze data. **C.** Use BigQuery as the data warehouse. Connect all vehicles to the network and stream data into BigQuery using Cloud Pub/Sub and Cloud Dataflow. Use Google Data Studio for analysis and reporting. **D.** Use Cloud Dataproc Hive as the data warehouse. Upload gzip files to a Multi-Regional Cloud Storage bucket. Upload this data into BigQuery using gcloud. Use Google data Studio for analysis and reporting. **Answer: C**

**NEW QUESTION: 3** 次の表に示すエンドポイントを持つ同期グループがあります。

Endpoint3でクラウド階層化が有効になっています。

File1という名前のファイルをEndpoint1に追加し、File2という名前のファイルをEndpoint2に追加します。

ファイルを追加してから24時間以内にFile1とFile2のどのエンドポイントが使用可能になるかを識別する必要があります。

何を識別すべきですか？ 回答するには、回答領域で適切なオプションを選択します。

注：それぞれの正しい選択は1ポイントの価値があります。 **Answer:** Explanation: Explanation

File1: Endpoint3 only Cloud Tiering: A switch to enable or disable cloud tiering. When enabled, cloud tiering will tier files to your Azure file shares. This converts on-premises file shares into a cache, rather than a complete copy of the dataset, to help you manage space efficiency on your server. With cloud tiering, infrequently used or accessed files can be tiered to Azure Files. File2:

Endpoint1, Endpoint2, and Endpoint3 References:
