(Choose two.)**A.** FortiGate has entered in to system conserve mode.**B.** FortiGate generated an event log for system conserve mode.**C.** By default, the FortiGate blocks new sessions.**D.** FortiGate changed the global av-failopen settings to idledrop.**Answer: A,C**

NEW QUESTION: 3 Is this how HPE Serviceguard Extension for SAP (SGeSAP) resumes operations when a hardware failure is detected? SGeSAP leverages SAP system replication software mirroring and automates the required steps to bring HANA back to operation.**A.** Yes**B.** No**Answer: A**
Explanation: Explanation/Reference: Explanation: HPE Serviceguard software provides a clustering solution for SAP HANA scale-up and scale-out instances. The solution leverages the SAP system replication software mirroring and automates the required steps to bring HANA back to operation after any component failure. This includes HANA memory

reconfigurations, secondary HANA instance takeovers and primary HANA instance demotions, virtual IP address moves and dual purpose instance handling. The scale-out cluster solution implements a many-to-many failover of all HANA nodes of the instance. It aims to cover Disaster Recovery scenarios and complements the host auto-failover HA solution that is built into HANA by SAP to protect against single node outages.

NEW QUESTION: 4 Your network contains an Active Directory forest. The forest contains two domains named contoso.com and corp.contoso.com. The forest contains four domain controllers. The domain controllers are configured as shown in the following table. All domain controllers are DNS servers. In the corp.contoso.com domain, you plan to deploy a new domain controller named DCS. You need to identify which domain controller must be online to ensure that DCS can be promoted successfully to a domain controller. Which domain controller should you identify?
A. DC2 B. DC1 C. DC3 D. DC4
Answer: C
Explanation: A. Wrong Domain B. Wrong Domain C. Right domain, RID Master must be online D. Right domain but Not needed to be online
Relative ID (RID) Master: Allocates active and standby RID pools to replica domain controllers in the same domain. (corp.contoso.com) Must be online for newly promoted domain controllers to obtain a local RID pool that is required to advertise or when existing domain controllers have to update their current or standby RID pool allocation. The RID master is responsible for processing RID pool requests from all domain controllers in a particular domain. When a DC creates a security principal object such as a user or group, it attaches a unique Security ID (SID) to the object. This SID consists of a domain SID (the same for all SIDs created in a domain), and a relative ID (RID) that is unique for each security principal SID created in a domain. Each DC in a domain is allocated a pool of RIDs that it is allowed to assign to the security principals it creates. When a DC's allocated RID pool falls below a threshold, that DC issues a request for additional RIDs to the domain's RID master. The domain RID master responds to the request by retrieving RIDs from the domain's unallocated RID pool and assigns them to the pool of the requesting DC. At any one time, there can be only one domain controller acting as the RID master in the domain. <http://support.microsoft.com/kb/223346>
