NEW QUESTION: 1The Chief Executive Officer (CEO) of an Internet service provider (ISP) has decided to limit the company's contribution to worldwide Distributed Denial of Service (DDoS) attacks. Which of the following should the ISP implement? (Select TWO).**A.** Block traffic from the ISP's networks destined for blacklisted IPs.**B.** Scan the ISP's customer networks using an up-to-date vulnerability scanner.**C.** Notify customers when services they run are involved in an attack.**D.** Block traffic with an IP source not allocated to customers from exiting the ISP's network.**E.** Prevent the ISP's customers from querying DNS servers other than those hosted by the ISP.**Answer:** **C,D****Explanation:** Since DDOS attacks can originate from many different devices and thus makes it harder to defend against, one way to limit the company's contribution to DDOS attacks is to notify customers about any DDOS attack when they run services that are under attack. The company can also block IP sources that are not allocated to customers from the existing SIP's network.**Incorrect Answers:** A: Blocking traffic is in essence denial of service and this should not be implemented by the company.B: Preventing the ISP's customers from querying/accessing other DNS servers is also a denial of service.C: Making use of vulnerability scanners does not limit a company's contribution to the DDOS attacks.**References:** Gregg, Michael, and Billy Haines, CASP CompTIA Advanced Security Practitioner Study Guide, John Wiley & Sons, Indianapolis, 2012, p. 286
