NEW QUESTION: 1 Suppose a developer wants to create an automatic persistent timer that performs data validation every hour. Given the following stateless session bean:
`@Stateless
Public class OrderVerificationBean {
Private void verificationExternalOrders () { // do something }
}`
What is the minimum modification you would need to make to the bean to create the automatic persistent timer?
A. Modify the verifyExternalOrders method to look like this:
`@Schedule private void verifyExternalOrders () { // do something }`
B. Modify the verifyExternalOrders method to look like this:
`@Schedule (persistent = true) private void verifyExternalOrders () { // do something }`
C. Modify the verifyExternalOrders method to look like this:
`@Schedule (hour = "*", persistent = true) private void verifyExternalOrders () { // do something }`
D. Modify the verifyExternalOrders method to look like this:
`@Schedule (hour = "*") private void verifyExternalOrders () { // do something }`
Answer: D
Explanation: Not D: Timers are persistent by default. If the server is shut down or crashes, persistent timers are saved and will become active again when the server is restarted. If a persistent timer expires while the server is down, the container will call the @Timeout method when the server is restarted. Nonpersistent programmatic timers are created by calling TimerConfig.setPersistent(false) and passing the TimerConfig object to one of the timer-creation methods.

Explanation: Explanation Amazon CloudWatch monitors your Amazon Web Services (AWS) resources and the applications you run on AWS in real-time. You can use CloudWatch to collect and track metrics, which are the variables you want to measure for your resources and applications. CloudWatch has the following limits: You get 10 CloudWatch metrics, 10 alarms, 1,000,000 API requests, and 1,000 Amazon SNS email notifications per customer per month for free. You can assign up to 10 dimensions per metric. You can create up to 5000 alarms per AWS account. Metric data is kept for 2 weeks. The size of a PutMetricData request is limited to 8KB for HTTP GET requests and 40KB for HTTP POST requests. You can include a maximum of 20 MetricDatum items in one PutMetricData request. A MetricDatum can contain a single value or a StatisticSet representing many values.
