Our company is famous for its high-quality CCST-Networking exam questions in this field especially for Cisco certification exams.

**NEW QUESTION: 1**A company is migrating its marketing website and content management system from an on- premises data center to AWS. The company wants the AWS application to be developed in a VPC with Amazon EC2 instances used for the web servers and an Amazon RDS instance for the database. The company has a runbook document that describes the installation process of the on-premises system. The company would like to base the AWS system on the processes referenced in the runbook document. The runbook document describes the installation and configuration of the operating systems, network settings, the website, and content management system software on the servers. After the migration is complete, the company wants to be able to make changes quickly to take advantage of other AWS features. How can the application and environment be deployed and automated in AWS, while allowing for future changes?**A.** Update the runbook to describe how to create the VPC, the EC2 instances, and the RDS instance for the application by using the AWS Console. Make sure that the rest of the steps in the runbook are updated to reflect any changes that may come from the AWS migration.**B.** Write an AWS CloudFormation template that creates the VPC, the EC2 instances, and the RDS instance for the application. Ensure that the rest of the steps in the runbook are updated to reflect any changes that may come from the AWS migration.**C.** Write a Python script that uses the AWS API to create the VPC, the EC2 instances, and the RDS instance for the application. Write shell scripts that implement the rest of the steps in the runbook. Have the Python script copy and run the shell scripts on the newly created instances to complete the installation.**D.** Write an AWS CloudFormation template that creates the VPC, the EC2 instances, and the RDS instance for the application. Include EC2 user data in the AWS CloudFormation template to install and configure the software.**Answer: D**Explanation:A: This is not automated. B: This cannot be easily re-used for future.C: The runbook is still considered manual

configuration. Only D is fully automated.

**NEW QUESTION: 2** Which of the following is a main element of the management control practice?  
**A.** A consistent approach to benefits categorization  
**B.** Guidance and templates for business case preparation  
**C.** Tailored investment criteria  
**D.** Collaborative working between the Portfolio Office and the organizations communications experts  
**Answer: C**

**NEW QUESTION: 3** A system administrator needs to run a number of applications that have been compiled for different versions of Solaris OS. The applications need to be consolidated on a single server. Which two statements are correct? (Choose two.)  
**A.** With Solaris OS application binary compatibility between releases, the chosen platform is multiple zones on a single OS instance running the latest required release.  
**B.** The applications run in different domains, one for each required OS release.  
**C.** With Solaris OS application binary compatibility between releases, the chosen platform is multiple zones on a single OS instance running the oldest required release.  
**D.** The applications run in different zones, each running their own OS releases.  
**Answer: A,D**
