However, they passed the exam successfully.

NEW QUESTION: 1 Which two characteristics of the TACACS+ protocol are true? (Choose two.)**A.** encrypts the body of every packet**B.** uses UDP ports 1645 or 1812**C.** is an open RFC standard protocol**D.** offers extensive accounting capabilities**E.** separates AAA functions**Answer: A,E**
Explanation:
http://www.cisco.com/en/US/tech/tk59/technologies_tech_note09186a0080094e99.shtml
Packet Encryption RADIUS encrypts only the password in the access-request packet, from the client to the server. The remainder of the packet is unencrypted. Other information, such as username, authorized services, and accounting, can be captured by a third party.TACACS+ encrypts the entire body of the packet but leaves a standard TACACS+ header. Within the header is a field that indicates whether the body is encrypted or not. For debugging purposes, it is useful to have the body of the packets unencrypted. However, during normal operation, the body of the packet is fully encrypted for more secure communications.Authentication and Authorization RADIUS combines authentication and authorization. The access- accept packets sent by the RADIUS server to the client contain authorization information. This makes it difficult to decouple authentication and authorization.TACACS+ uses the AAA architecture, which separates AAA. This allows separate authentication solutions that can still use TACACS+ for authorization and accounting. For example, with TACACS+, it is possible to use Kerberos authentication and TACACS+ authorization and accounting. After a NAS authenticates on a Kerberos server, it requests authorization information from a TACACS+ server without having to re-authenticate. The NAS informs the TACACS+ server that it has successfully authenticated on a Kerberos server, and the server then provides authorization information.During a session, if additional authorization checking is needed, the access server checks with a TACACS+ server to

determine if the user is granted permission to use a particular command. This provides greater control over the commands that can be executed on the access server while decoupling from the authentication mechanism.

NEW QUESTION: 2 Refer to the exhibit.An administrator pings the default gateway at 10.10.10.1 and sees the output as shown. At which OSI layer is the problem?**A.** session layer**B.** application layer**C.** network layer**D.** data link layer**E.** access layer**Answer: C**

NEW QUESTION: 3A customer has held an account at a bank and has lived locally for over 25 years. Historically he has come into the bank monthly to deposit a $1,500 retirement check from the company where he worked. He is well known at the bank and often brings the staff cookies. Over the past four months, he has come into the bank every Monday, Wednesday, and Thursday to make $3,000 cash deposits into his account. A review of his account shows that an $8,500 check made out to cash clears his account each week. The bank has decided to file a suspicious transaction report (STR).What is the important fact to include in the STR?**A.** The recent change in the timing of deposits and withdrawals in the account**B.** The fact that the customer has lived in the area and has banked at this bank for 25 years**C.** The fact that the account holder is well known to the bank staff**D.** The customer's work history and the amount of his monthly retirement check**Answer: D**

NEW QUESTION: 4 You are the HR Professional for your organization. You are discussing the status of your company's employees to determine who may be considered nonexempt versus exempt. Which one of the following types of employees can never be considered exempted from overtime provisions?**A.** Sales people**B.** Manual workers**C.** Administrative assistants**D.** Managers**Answer: B**
