Your network contains a client computer that runs the 64-bit version of Windows 7 and the 32-bit version of Windows 7. Some client computers have the Microsoft Application Virtualization (App-V) client installed. You have an Application named App1. You have a 64-bit version of App1, a 32-bit version of App1, and a virtual version of App1. You need to deploy the Application to all of the client computers. The solution must minimize the amount of administrative effort. What should you do?
A. Create a new Application for each version of App1.
B. Create a new Application that has three different deployment types and configure global conditions for each of the deployment types.
C. Create a new package for each version of App1.
