NEW QUESTION: 3Your network contains a server named Server1 that runs Windows Server 2012. Server1 has the Hyper-V server role installed. Server1 hosts four virtual machines named VM1, VM2, VM3, and VM4. Server1 is configured as shown in the following table. You need to configure VM4 to track the CPU, memory, and network usage. What should you configure?**A.** NUMA topology**B.** Resource metering**C.** The VLAN ID**D.** Single-root I/O virtualization**E.** Resource control**F.** Virtual Machine Chimney**G.** The startup order**H.** Port mirroring**I.** Integration Services
J. Automatic Start Action**K.** Processor Compatibility
Answer: **B**Explanation:
Explanation/Reference:Explanation:IT organizations need tools to charge back business units that they support while providing the business units with the right amount of resources to match their needs. For hosting providers, it is equally important to issue chargebacks based on the amount of usage by each customer. To implement advanced billing strategies that measure both the assigned capacity of a resource and its actual usage, earlier versions of Hyper-V required users to develop their own chargeback solutions that polled and aggregated performance counters. These solutions could be expensive to develop and sometimes led to loss of historical data. To assist with more accurate, streamlined chargebacks while protecting historical information, Hyper-V in Windows Server 2012 R2 "Server 8 Beta" introduces Resource Metering, a feature that allows customers to create cost-effective, usage-based billing solutions. With this feature, service providers can choose the best billing strategy for their business model, and independent software vendors can develop more reliable, end-to-end
