NEW QUESTION: 4 **A. Option D** **B. Option C** **C. Option A** **D. Option B****Answer: C, D****Explanation:** Explanation Office Telemetry logging in Office 2013 works as follows: When an Office document or solution is loaded, used, closed, or raises an error in certain Office 2013 applications, the application adds a record about the event to a local data store. Each record includes a description of the problem and a link to more information. Inventory and usage data is also tracked. Office Telemetry is new for Office 2013, so it's not built into Office 2003, Office 2007, and Office 2010. For those clients, you deploy an agent that collects information about the installed add-ins and the most recently used documents. You won't get application event data for these clients like you do with Office 2013 clients, but you'll get inventory and usage data that helps you discover what is being used and likely important to your business. Microsoft Excel XLS real-time data (RTD) add-ins are Excel worksheets that use the RealTimeData worksheet function to call an Automation server to retrieve data in real-time. This add-in only works with Excel 2013. Therefore, the answer to this question is to open Excel 2013 either on a client running Windows 7 or on a client running Windows 8.
