NEW QUESTION: 1 Which feature can be implemented to avoid any MPLS packet loss?
A. conditional label advertisement
B. IP TTL propagation
C. label advertisement sync
D. LDP IGP sync
E. PHP
Answer: D
Explanation: Packet loss can occur because the actions of the IGP and LDP are not synchronized. Packet loss can occur in the following situations: When an IGP adjacency is established, the router begins forwarding packets using the new adjacency before the LDP label exchange completes between the peers on that link. If an LDP session closes, the router continues to forward traffic using the link associated with the LDP peer rather than an alternate pathway with a fully synchronized LDP session.

NEW QUESTION: 2 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have a server named Server1 that has Microsoft SQL Server installed. Server1 has SQL Server Audit configured to send audit even records to a file. You need to ensure that a database user named User1 can review the audit data. Solution: You grant the VIEW ANY DEFINITION permission to User1. Does this meet the goal?
A. Yes
B. No
Answer: B
Explanation: Explanation/Reference: Explanation: Each feature and command for SQL Server Audit has individual permission requirements. Unless otherwise specified, viewing catalog views requires a principal to have one of the following: The VIEW SERVER STATE permission. The VIEW AUDIT STATE permission (gives only the principal access to the sys.server_audits catalogview). Membership in the sysadmin fixed server role. The CONTROL SERVER permission. The ALTER ANY AUDIT permission. A principal must have the VIEW SERVER STATE or ALTER ANY AUDIT permission to use the Dynamic Management Views.
