**NEW QUESTION: 2** You develop a SQL Server Integration Services (SSIS) package that imports Windows Azure SQL Database data into a data warehouse every night. The Windows Azure SQL Database data contains many misspellings and variations of abbreviations. To import the data, a developer used the Fuzzy Lookup transformation to choose the closest-matching string from a reference table of allowed values. The number of rows in the reference table is very large. If no acceptable match is found, the Fuzzy Lookup transformation passes a null value. The current setting for the Fuzzy Lookup similarity threshold is 0.50. Many values are incorrectly matched. You need to ensure that more accurate matches are made by the Fuzzy Lookup transformation without degrading performance. What should you do? **A.** Change the similarity threshold to 0.40. **B.** Decrease the maximum number of matches per lookup. **C.** Change the similarity threshold to 0.85. **D.** Increase the maximum number of matches per lookup. **Answer: C** Explanation:

Explanation\* Similarity threshold Set the similarity threshold at the component level by using the slider. The closer the value is to 1, the closer the resemblance of the lookup value to the source value must be to qualify as a match. Increasing the threshold can improve the speed of matching since fewer candidate records need to be considered.

AC"]}]B. Make:"Gocar, "Model": "Zoom", "Features": ["Power Windows", "Manual Dnve", "Auto AC"]}]C. {"Make": Gocar, "Model": Zoom, "Features": Power Windows, Manual Drive, Auto AC}D. 'Make ": "Gocar1, "Model": "Zoom", "Features": ["Power Windows", "Manual Drive", "Auto AC"]

**Answer: B**Explanation:ExplanationJSON syntax structure: + uses curly braces {} to hold objects and square brackets [] to hold arrays + JSON data is written as key/value pairs + A key/value pair consists of a key (must be a string in double quotation marks ""), followed by a colon :, followed by a value. For example: "name":"John" + Each key must be unique + Values must be of type string, number, object, array, boolean or null + Multiple key/value within an object are separated by commas , JSON can use arrays. Arrays are used to store multiple values in a single variable. For example:{"name":"John","age":30,"cars":["Ford", "BMW", "Fiat"]}In the above example, "cars" is an array which contains three values "Ford", "BMW" and "Fiat".Note: Although our correct answer above does not have curly braces to hold objects but it is still the best choice here.
