The best option is to create a second CLB, attach the new Autoscaling Group and then use Route53 to divert the traffic.Option B is wrong because just having EC2 instances running with the new

code will not help. Option C is wrong because Elastic beanstalk is good for development environments, and also there is no mention of having 2 environments where environment url's can be swapped. Option D is wrong because you still need Route53 to split the traffic.
