NEW QUESTION: 2 You have an Azure Active Directory (Azure AD) tenant named contoso.com that has a security group named Group1. Group1 is configured for assigned membership. Group1 has 50 members, including 20 guest users. You need to recommend a solution for evaluating the membership of Group1. The solution must meet the following requirements: * The evaluation must be repeated automatically every three months * Every member must be able to report whether they need to be in Group1 * Users who report that they do not need to be in Group1 must be removed from Group1 automatically * Users who do not report whether they need to be in Group1 must be removed from Group1 automatically. What should you include in the recommendation? **A.** Create an access review. **B.** Change the Membership type of Group1 to Dynamic User. **C.** Implement Azure AD Privileged Identity Management. **D.** Implement Azure AD Identity Protection. **Answer: B** Explanation: In Azure Active Directory (Azure AD), you can create complex attribute-based rules to enable dynamic memberships for groups. Dynamic group membership reduces the administrative overhead of adding and removing users. When any attributes of a user or device change, the system evaluates all dynamic group rules in a directory to see if the change would trigger any group adds or removes. If a user or device satisfies a rule on a group, they are added as a member of that group. If they no longer satisfy the rule, they are removed.
