NEW QUESTION: 2 Which two pieces of information are communicated by IS-IS TLVs? (Choose two.) **A.** authentication key **B.** network protocols supported **C.** PDU Length **D.** designated router priority **Answer: A, B**

NEW QUESTION: 3

DBMS_CLOUDパッケージのプロシージャについて正しい3つのステートメントはどれですか？ (3つ選択してください。) **A.**

DBMS_CLOUD.CREATE_EXTERNAL_TABLEプロシージャは、クラウド内のファイルに外部テーブルを作成します。Autonomous Data Warehouseの外部データに対してクエリを実行できます。 **B.**

DBMS_CLOUD.PUT_OBJECTプロシージャは、ファイルをCloud Object StorageからAutonomous Data Warehouseにコピーします。 **C.**

DBMS_CLOUD.VALIDATE_EXTERNAL_TABLEプロシージャは、外部テーブルのソースファイルを検証し、ログ情報を生成し、外部テーブルに指定されたフォーマットオプションと一致しない行をAutonomous Data Warehouseのbadfileテーブルに格納します。 **D.**

DBMS_CLOUD.DELETE_FILEプロシージャは、Autonomous Data Warehouseデータベースから資格情報ファイルを削除します。 **E.**

DBMS_CLOUD.CREATE_CREDENTIALプロシージャは、Cloud Object Storageの資格情報をAutonomous Data Warehouseデータベースに格納します。 **Answer: A, C, E**

Explanation: DELETE_FILE Procedure This procedure removes the specified file from the specified directory on Autonomous Data Warehouse. CREATE_CREDENTIAL Procedure This procedure stores Cloud Object Storage credentials in the Autonomous Data Warehouse database. Use stored credentials for data loading or for querying external data residing in the Cloud. PUT_OBJECT Procedure This procedure copies a file from Autonomous Data Warehouse to the Cloud Object Storage. The maximum file size allowed in this procedure is 5 gigabytes (GB). VALIDATE_EXTERNAL_TABLE Procedure This procedure validates the source files for an external table, generates log information, and stores the rows that do not match the format options specified for the external table in a badfile table on Autonomous Data Warehouse. CREATE_EXTERNAL_TABLE Procedure This procedure creates an external table on files in the

Cloud. This allows you to run queries on external data from Autonomous Data Warehouse. To use Data Pump from ADB, a credential identifying the Object Storage bucket to use must be defined with a DBMS_CLOUD.CREATE_CREDENTIAL function. This will allow ADB to access objects that are stored in the object store, including dump files. To export an existing database to prepare for import into ADB, use the XTP command and add the exclude option for database functionality that is not recommended or supported in ADB. This will prevent errors during the import process. This process is not automatic. And if the logs are not moved, you will receive a warning when running the MDB that the logs are not there. In this example, we're moving the log import.log to object store with a DBMS_CLOUD.PUT_OBJECT command.

VALIDATE_EXTERNAL_TABLE Procedure This procedure validates the source files for an external table, generates log information, and stores the rows that do not match the format options specified for the external table in a badfile table on Autonomous Database. The overloaded form enables you to use the operation_id parameter.

PUT_OBJECT Procedure This procedure copies a file from Autonomous Database to the Cloud Object Storage. The maximum file size allowed in this procedure is 5 gigabytes (GB)

DELETE FILE Procedure This procedure removes the specified file from the specified directory on Autonomous Database.

CREATE_EXTERNAL_TABLE Procedure This procedure creates an external table on files in the Cloud. This allows you to run queries on external data from Autonomous Database.

C. Both the statements execute and give the same result
D. Only the first SQL statement executes successfully
