NEW QUESTION: 3 Which of the following security design patterns provides an alternative by requiring that a user's authentication credentials be verified by the database before providing access to that user's data? **A.** Password propagation **B.** Authenticated session **C.** Secure assertion **D.** Account lockout **Answer: A** Explanation: Password propagation provides an alternative by requiring that a user's authentication credentials be verified by the database before providing access to that user's data. Answer D is incorrect. Account lockout implements a limit on the incorrect password attempts to protect an account from automated password-guessing attacks. Answer B is incorrect. Authenticated session allows a user to access more than one access-restricted Web page without re-authenticating every page. It also integrates user authentication into the basic session model. Answer A is incorrect. Secure assertion distributes application-specific sanity checks throughout the system.
