So we have invested a lot of energy to ensure the quality of the HPE6-A86 training material, This package includes all the exams of one specific vendor e.g., if you wish to be Microsoft certified, then you can only buy our Bundle Package.

Because of its high efficiency, you can achieve remarkable results, **HPE6-A86 Study Tool** Our best exam materials are professional in quality and responsible in service, In spite of being a hard core IT exam, it can easily be passed with the help of HPE6-A86 dumps material.This highly demanded and results-producing authentic dumps material can be obtained from Photoexperienceacademy.

We will make sure that your material always keep up to date.

NEW QUESTION: 1会社は、カスタムソリューションを使用して、オンプレミスのMicrosoft SQL Serverパイプラインを管理します。データエンジニアリングチームは、SQL Serverからデータを取得してAzure

Blobストレージに移行するプロセスを実装する必要があります。プロセスは、データのライフサイクルを調整および管理する必要があります。オンプレミスのSQL

Serverデータベースに接続するようにAzure Data Factoryを構成する必要があります。

順番に実行する必要がある3つのアクションはどれですか？回答するには、適切なアクションをアクションのリストから回答エリアに移動し、正しい順序に並べます。**Answer:** Explanation:

Explanation
Step 1: Create a virtual private network (VPN) connection from on-premises to Microsoft Azure. You can also use IPSec VPN or Azure ExpressRoute to further secure the communication channel between your on-premises network and Azure. Azure Virtual Network is a logical representation of your network in the cloud. You can connect an on-premises network to your virtual network by setting up IPSec VPN (site-to-site) or ExpressRoute (private peering).
Step 2: Create an Azure Data Factory resource.
Step 3: Configure a self-hosted integration runtime. You create a self-hosted integration runtime and associate it with an on-premises machine with the SQL Server database. The self-hosted integration runtime is the component that copies data from the SQL Server database on your machine to Azure Blob storage.
Note: A self-hosted integration runtime can run copy activities between a cloud data store and a data store in a private network, and it can dispatch transform activities against compute resources in an on-premises network or an Azure virtual network. The installation of a self-hosted integration runtime needs on an on-premises machine or a virtual machine (VM) inside a private network.

NEW QUESTION: 2An administrator needs to migrate a legacy physical application server to a virtual machine within a vSphere 6 cluster. As part of the conversion, the administrator must reduce the size of the virtual disks.What action should the administrator take to create a virtual machine with smaller virtual disks than the original physical server?**A.** Use VMware Converter hot cloning with volume-based cloning at the file level.**B.** Use VMware Converter hot cloning with volume-based cloning at the block level.**C.** Shut down the physical server and use VMware

Converter cold cloning with volume-based cloning at the disk level.**D.** Shut down the physical server and use VMware Converter cold cloning with volume-based cloning at the file level.

Answer: AExplanation:Explanation/Reference:Explanation: When reducing the disk volume size, the cloning operation switches from a Block level clone to a File level clone operation, meaning each individual file on the filesystem is copied over to the virtual machines hard drive rather than a block by block image of the drive. This can cause issues if the filesystem on the source machine is not in good health (for example, if it is severely fragmented, the physical drive has unrecorded bad sectors, or system files are damaged or missing in the index tables of the NTFS file system).Reference: https://kb.vmware.com/selfservice/microsites/search.do?language=en_US&cmd=displayKC&externalId=1014872

NEW QUESTION: 3Sie haben eine Microsoft SQL Server-Datenbank mit dem Namen DB1. Verschachtelte und rekursive Trigger für DB1 sind deaktiviert. In der Datenbank ist ein DDL-Trigger namens TableAudit vorhanden. Der Trigger erfasst den Namen jeder Tabelle beim Erstellen der Tabelle. Sie definieren eine Richtlinie für die Datenbank mithilfe der richtlinienbasierten SQL Server-Verwaltung. Die Richtlinie erfordert, dass alle Tabellennamen das Präfix tbl verwenden. Sie setzen den Auswertungsmodus für die Richtlinie auf Bei Änderung: Verhindern. Sie stellen fest, dass Entwickler neue Tabellen hinzufügen können, die das erforderliche Präfix nicht im Tabellennamen enthalten. Sie müssen sicherstellen, dass die Richtlinie durchgesetzt wird. Was sollte man tun?**A.** Verschachtelte Trigger aktivieren.**B.** Aktiviert rekursive Trigger.**C.** Ändern Sie den Richtlinienbewertungsmodus in On Schedule.**D.** Deaktivieren Sie den TableAudit-Trigger.**Answer:** AExplanation:ExplanationIf the nested triggers server configuration option is disabled, On change: prevent will not work correctly. Policy-Based Management relies on DDL triggers to detect and roll back DDL operations that do not comply with policies that use this evaluation mode. Removing the Policy-Based Management DDL triggers or disabling nest triggers, will cause this evaluation mode to fail or perform unexpectedly.References:
