If the E-S4CPE-2023 Photoexperienceacademy questions somehow fails to deliver as we promised, then you can get your money back, If they do discover any renewal in our E-S4CPE-2023 torrent VCE, they will in the first time inform the customers of the renewal by sending the downloading of E-S4CPE-2023 dumps torrent to the customers.

NEW QUESTION: 1 How is NIST SP800-131a compliance configured?**A.** Enable NIST mode, disable FIPS mode, optionally enable TLS 1.2**B.** Enable FIPS mode, set the tuning parameter to strict mode, optionally enable TLS 1.2**C.** Enable NIST SP800 mode, disable FIPS mode**D.** Enable NIST mode, set FIPS to active mode, enable TLS 1.2**Answer: C**

NEW QUESTION: 2 With Cisco IOS zone-based policy firewall, by default, which three types of traffic are permitted by the router when some of the router interfaces are assigned to a zone? (Choose three.)**A.** traffic flowing between a zone member interface and any interface that is not a zone member**B.** traffic flowing between a zone member interface and another interface that belongs in a different zone**C.** traffic flowing to and from the router interfaces (the self zone)**D.** traffic flowing among the interfaces that are not assigned to any zone**E.** traffic flowing to the zone member interface that is returned traffic**F.** traffic flowing among the interfaces that are members of the same zone**Answer: C,D,F**Explanation:
http://www.cisco.com/en/US/products/sw/secursw/ps1018/products_tech_note09186a00808bc994.shtmlRules For Applying Zone-Based Policy FirewallRouter network interfaces' membership in zones is subject to several rules that govern interface behavior, as is the traffic moving between zone member interfaces:A zone must be configured before interfaces can be assigned to the zone.An interface can be assigned to only one security zone.All traffic to and from a given interface is implicitly blocked when the interface is assigned to a zone, except traffic to and from other interfaces in the same zone, and traffic to any interface on the router. Traffic is implicitly allowed to flow by default among interfaces that are members of the same zone. In order to permit traffic to and from a zone member interface, a policy allowing or inspecting traffic must be configured between that zone and any other zone.The self zone is the only exception to the default deny all policy. All traffic to any router interface is allowed until traffic is explicitly denied.Traffic cannot flow between a zone member interface and any interface that is not a zone member. Pass, inspect, and drop actions can only be applied between two zones.Interfaces that have not been assigned to a zone function as classical

router ports and might still use classical stateful inspection/CBAC configuration.If it is required that an interface on the box not be part of the zoning/firewall policy. It might still be necessary to put that interface in a zone and configure a pass all policy (sort of a dummy policy) between that zone and any other zone to which traffic flow is desired.From the preceding it follows that, if traffic is to flow among all the interfaces in a router, all the interfaces must be part of the zoning model (each interface must be a member of one zone or another).The only exception to the preceding deny by default approach is the traffic to and from the router, which will be permitted by default. An explicit policy can be configured to restrict such traffic.

NEW QUESTION: 3 Refer to the exhibit.Which statement about the rogue access point screenshot is true?**A.** AP-2 sends de-authentication packets on air using BSSID 74:a2:e6:71:51:c3 as part of containment process.**B.** SSID on this rogue AP is WMM enabled and this rogue AP is contained by single closest detecting access point at a given time.**C.** This rogue AP is working on channel 1 and is manually contained using all detecting access points.**D.** This rogue AP is contained by AP-1 and AP-2 in round-robin fashion during off-channel scan period.
Answer: B Explanation:
http://www.cisco.com/c/en/us/support/docs/wireless/4400-series-wireless-lan-controllers/110263-rogue-based-rogue-classification.html

NEW QUESTION: 4 When compared with legacy Power Save mode, how does VHT TXOP power save improve battery life for devices on a WLAN?**A.** VHT TXOP power save uses the partial AID in the preamble to allow clients to identify frames targeted for them.**B.** VHT TXOP power save allows the WLAN transceiver to disable more components when in a low power state.**C.** Legacy Power Save mode was removed in the 802.11ac amendment.**D.** VHT TXOP power save allows stations to enter sleep mode and legacy Power Save does not.**Answer: A**
