NEW QUESTION: 1Which two options are characteristics of a fast reboot?**A.** A fast reboot can only be executed on the SPARC platform when theconfig/fastreboot_default property for the svc:/system/boot-config:default serviceis set to true.**B.** A fast reboot uses an in-kernel boot loader to load the kernelinto memory.**C.** A fast reboot is the default on all platforms.**D.** A fast reboot bypasses grub.**E.** A fast reboot cannot be used after a system panic on the x86 platform.
Answer: A, BExplanation:C: To change the default behavior of the Fast Reboot feature on the SPARC platform, so that a fast reboot is automatically performed when the system reboots, see below.The following example shows how to set the property's value to true on the SPARC platform, so that a fast reboot is initiated by default:# svccfg -s "system/boot-config:default" setprop config/fastreboot_default=true # svcadm refresh svc:/system/boot-config:defaultD: Fast Reboot implements an in-kernel boot loader that loads the kernel into memory and then switches to that kernel.The firmware and boot loader processes are bypassed, which enables the system to reboot withinseconds.The Fast Reboot feature is managed by SMF and implemented through a boot configuration service, svc:/system/boot-config. The boot-config service provides a means for setting or changing the default boot configuration parameters. When the config/fastreboot_default property is set to true, the system performs a fast reboot automatically, without the need to use the reboot -f command. This property's value is set to true on the x86 platform. For task-related information, including how to change the default behavior of Fast Reboot on the SPARC platform, see Accelerating the Reboot Process on an x86 Based System.Note: One new feature, called Fast Reboot, will allow the system to boot up without doing the routine set of hardware checks, a move that can make system boot times up to two-and-a-half times faster, Oracle claimed. This feature can be handy in that an administrator applying a patch or software update across thousands of Solaris deployments can reboot them all the more quickly.Reference: System Administration Guide: Basic Administration, Oracle Solaris 11, Using Fast Reboot
