NEW QUESTION: 3DRAG DROPYou need to secure the website.Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.**Answer:** Explanation:Box 1:Box 2:Box 3:Ref: http://azure.microsoft.com/en-us/documentation/articles/web-sites-configure-ssl-certificate/ Topic 9, File Tax-Related DocumentBackgroundYou are developing an Azure solution that individuals and small businesses will use to prepare and file tax- related documents.Business RequirementsGeneralThe solution must provide a way for customers to enter personal and demographic information. Customers must be able to upload income documents and related documents to the solution. The solution must provide reports and summary documents for customers in PDF format.Scope and Device AccessibilityThe solution must support two operational modes: On-Peak and Off-Peak. On-Peak is defined as the first quarter of a year. Off-Peak is defined as the other three quarters of a year. Customers must be able to access the solution by using desktop computers, laptop computers, mobile devices, and tablets.High Availability and Business ContinuityThe solution must be available at all times. When the solution transitions between Off-Peak mode and On-Peak mode, solution availability must not be affected. Disaster recovery must be established for the customers' stored data.Diagnostics The solution must log relevant diagnostic data that can be used to troubleshoot the cloud service.ScalabilityThe solution must scale out while transitioning from Off-Peak mode to On-Peak mode.CostThe solution must use cloud resources optimally to minimize operating costs.Storage and SecurityThe solution must be secure to prevent any anonymous access (including read access) to the customers' tax documents.Cross-Premises NetworkingThe

solution must extend the developers' on-premises network into Azure.Technical Requirements The logical design for the solution is shown in the following exhibit.Platform-as-a-Service (PaaS)The solution must have two roles: a web role and worker role. The web interface of the solution uses a web role to accept and send user input and any related documents. The worker role must access the stored data and prepare the tax documents in the background.Compute The solution must support a minimum of 10 role instances. When the solution is in On-Peak mode, each role instance must be allocated at least 6 GB of memory. The memory can be scaled down to 3 GB when the solution is in Off-Peak mode.The solution must cache documents locally. The cache does not need to be refreshed during the lifecycle of the worker role.Role instances that are running should not be affected by topology changes such as an increase in instance count.StorageThe web role must store documents in blob storage. A SQL database is used to store customer information. The worker role must use queues to process the final tax documents.Performance and ScalabilityWhen the solution is in Off-Peak mode, it must support at least 150 concurrent database sessions, and the maximum size of the database is 50 GB. When the solution is in On-Peak mode, it must support 750 concurrent database sessions, and the maximum size of the database is 300 GB. Geo-replication must be enabled and must be configurable by using the Azure management portal.Software PrerequisitesThe solution must install the software that is necessary to generate PDF documents on the server. The software will be provided as a Windows Installer package.DebuggingSolution errors and warnings that occur in a web role must be logged. The worker role must log any crash dump files. Detailed information about errors and their context must be collected so that the environment in which errors occurred can be simulated locally.SecurityAt the time that a customer's tax information and documents are accepted, the solution must send an email to the customer. The email contains a secure hyperlink that the customer can use to upload any additional necessary documents. The customer is asked to upload these documents within 48 hours. If the customer does not upload the documents within 48 hours, the solution should not issue a new hyperlink. The solution must send an email to the customer to remind the customer to use the original hyperlink to upload any additional necessary documents.Network ServicesThe solution must use a cross-premises secure network. The network must be configurable by using the Azure management portal.Social StructureRelevant portions of the solution files are shown in the following code segments. Line numbers in the code segments are included for reference only and include a two-character prefix that denotes the specific file to which they belong.
