NEW QUESTION: 1 Case Study: 4 - Dress4WinCompany OverviewDress4win is a web-based company that helps their users organize and manage their personal wardrobe using a website and mobile application. The company also cultivates an active social network that connects their users with designers and retailers. They monetize their services through advertising, e-commerce, referrals, and a freemium app model.Company BackgroundDress4win's application has grown from a few servers in the founder's garage to several hundred servers and appliances in a colocated data center. However, the capacity of their infrastructure is now insufficient for the application's rapid growth. Because of this growth and the company's desire to innovate faster, Dress4win is committing to a full migration to a public cloud.Solution ConceptFor the first phase of their migration to the cloud, Dress4win is considering moving their development and test environments. They are also considering building a disaster recovery site, because their current infrastructure is at a single location. They are not sure which components of their architecture they can migrate as is and which components they need to change before migrating them.Existing Technical EnvironmentThe Dress4win application is served out of a single data center location.Databases:MySQL - user data, inventory, static dataRedis - metadata, social graph, cachingApplication servers:Tomcat - Java micro-servicesNginx - static contentApache Beam - Batch processingStorage appliances:iSCSI for VM hostsFiber channel SAN - MySQL databasesNAS - image storage, logs, backupsApache Hadoop/Spark servers:Data analysisReal-time trending calculationsMQ servers:Messaging Social notificationsEventsMiscellaneous servers:Jenkins, monitoring, bastion hosts, security scannersBusiness RequirementsBuild a reliable and reproducible environment with scaled parity of production. Improve security by defining and adhering to a set of security and Identity and Access Management (IAM) best practices for cloud.Improve business agility and speed of innovation through rapid provisioning of new resources.Analyze and optimize architecture for performance in the cloud. Migrate fully to the cloud if all other requirements are met.Technical RequirementsEvaluate and choose an automation framework for provisioning resources in cloud. Support failover of the production environment to cloud during an emergency. Identify production services that can migrate to cloud to save capacity.Use managed services whenever possible.Encrypt data on the wire and at rest.Support multiple VPN connections between the

production data center and cloud environment.CEO StatementOur investors are concerned about our ability to scale and contain costs with our current infrastructure. They are also concerned that a new competitor could use a public cloud platform to offset their up-front investment and freeing them to focus on developing better features.CTO StatementWe have invested heavily in the current infrastructure, but much of the equipment is approaching the end of its useful life. We are consistently waiting weeks for new gear to be racked before we can start new projects. Our traffic patterns are highest in the mornings and weekend evenings; during other times, 80% of our capacity is sitting idle.CFO StatementOur capital expenditure is now exceeding our quarterly projections. Migrating to the cloud will likely cause an initial increase in spending, but we expect to fully transition before our next hardware refresh cycle. Our total cost of ownership (TCO) analysis over the next 5 years puts a cloud strategy between 30 to 50% lower than our current model.Dress4Win has end-to-end tests covering 100% of their endpoints.They want to ensure that the move to the cloud does not introduce any new bugs. Which additional testing methods should the developers employ to prevent an outage?**A.** They should run the end-to-end tests in the cloud staging environment to determine if the code is working as intended.**B.** They should enable Google Stackdriver Debugger on the application code to show errors in the code.**C.** They should add additional unit tests and production scale load tests on their cloud staging environment.**D.** They should add canary tests so developers can measure how much of an impact the new release causes to latency.**Answer: C**

NEW QUESTION: 2A. Export-SPWeb**B.** Backup-WebConfiguration**C.** Get-SPContentDatabase**D.** Restore-SPFarm**E.** Mount-SPContentDatabase**Answer: A,D**Explanation:*The Export-SPWeb cmdlet exports a site, list, or library. The capability to export from a library is a new feature in SharePoint 2013.*The Restore-SPFarm cmdlet restores one or more items from a backup such as an individual database, Web application, or the entire farm. This cmdlet can also be used to apply a farm template to the entire farm.*From Scenario:/ Periodically, you must provide an offline copy of site content from HQ-SP13 to the legaldepartment.

NEW QUESTION: 3A. Option A**B.** Option D**C.** Option B**D.** Option C**Answer: A**

NEW QUESTION: 4DRAG DROP You configure a SharePoint Server 2010 Service Pack 1 (SP1) farm. You need to configure Secure Store Service (SSS) for Microsoft Office Excel services with an unattended account. What should you do? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)**Answer:** Explanation:Explanation:http://technet.microsoft.com/en-us/library/hh525344.aspx 1.Configure a data access account2.Configure a Secure Store target application for the unattended service account3.Configure Excel Services Global Settings4.Configure a workbook to use the unattended service account Set-SPExcelUserDefinedFunction Sets properties of a user-defined function in Excel Services Application. Set-SPExcelServiceApplication Sets global properties for Excel Services Application. Set-SPExcelDataConnectionLibrary Sets properties of a data connection library for Excel Services Application.
