All in all, it's up to you to decide, Also some customers are purchasing [1z0-1127-24 Reliable Exam Guide](#) for their companies they will choose all the three versions of Certified Wireless IoT Solutions Administrator brain dumps so that they can satisfy all people's characters.

The expressions used in CWISA-102 learning materials are very easy to understand, They are all great materials from painstaking effort of experts, so can be trusted with full heart.

NEW QUESTION: 1 Which two statements about VRF-lite are true? (Choose two) **A.** It should be used when a customer's router is connected to an ISP over OSPF **B.** It supports most routing protocols **C.** It can increase the packet switching rate **D.** It can support multiple customers on a single switch **E.** It supports MPLS-VRF label exchange and labeled packets **Answer: B,D** Explanation: Explanation In VRF-Lite, Route distinguisher (RD) identifies the customer routing table and allows customers to be assigned overlapping addresses. Therefore it can support multiple customers with overlapping addresses -> Answer 'It can support multiple customers on a single switch' is correct. VRFs are commonly used for MPLS deployments, when we use VRFs without MPLS then we call it VRF lite -> Answer 'It supports MPLS-VRF label exchange and labeled packets' is not correct. VRF-Lite supports most popular routing protocols: BGP, OSPF, EIGRP, RIP, and static routing -> Answer 'It supports most routing protocols, including EIGRP, ISIS, and OSPF' is correct.

NEW QUESTION: 2 Why is this the best design for the desktops for these user groups? **A.** This design provides the most security by limiting access to sensitive applications from the virtual desktop only and allows for secured centralization of user data and best user experience with Profile Management. **B.** This design is required to meet the high security printing requirements by limiting the ability to print from the applications only when accessing the vDisk data while providing the best user experience with Profile Management. **C.** This design will meet all security requirements and also allow for easy administrative maintenance and updates of the vDisk because it is the only image and contains everything. Profile Management will secure the users application data. **D.** This design meets the security needs and will provide a consistent user experience since applications are installed locally. Profile Management and single vDisk maintenance will make administration and management minimal. **Answer: A**

NEW QUESTION: 3 The security engineer receives an incident ticket from the helpdesk stating that DNS lookup requests are no longer working from the office. The network team has ensured that Layer 2 and Layer 3 connectivity are working. Which of the following tools would a security engineer use to make sure the DNS server is listening on port 53? **A.** NSLOOKUP **B.** NMAP **C.** NESSUS **D.** PING **Answer: B** Explanation: NMAP works as a port scanner and is used to check if the

DNS server is listening on port 53. Incorrect Answers: A: PING is in essence a network administration tool that is used to test the reachability of a host. B: NESSUS is used as a vulnerability scanner. C: NSLOOKUP is a tool used for querying the Domain Name System (DNS) to obtain domain name or IP address mapping or for any other specific DNS record. References: Gregg, Michael, and Billy Haines, CASP CompTIA Advanced Security Practitioner Study Guide, John Wiley & Sons, Indianapolis, 2012, pp. 172-173, 396

NEW QUESTION: 4 How should MMC be used during the upgrade? **A.** Use the Windows 2000 Server Active Directory Connector for two-way directory updates. Use MMC to administer the Exchange Server 5.5 mailboxes. **B.** Use the Exchange 2000 Server Active Directory connector for one-way directory updates from Exchange to Active Directory. Use MMC to administer the Exchange Server 5.5 mailboxes. **C.** Use the Exchange 2000 Server Active Directory Connector for two-way directories. Use MMC to administer the Exchange Server 5.5 mailboxes. **D.** Use the Windows 2000 Server Active Directory connector for a one-way directory update from Exchange to Active Directory. Use MMC to administer the Exchange Server 5.5 mailboxes. **Answer: C**
Explanation: The MMC is not usable to administering Exchange 5.5 mailbox repository; we need to use the Exchange 5.5 system manager tool to do that. To administering Exchange mailbox enabled user, we need to use Active Directory Users and Computers snap-in, click on the user account, right-click and select Exchange Task; we can not add or delete mailbox from Exchange 2000 system manager tool
