NEW QUESTION: 2

車間の距離を推定できるように、画像内の車の位置を特定する必要があります。

どのタイプのコンピュータビジョンを使用する必要がありますか？**A.** 顔検出**B.** 画像分類**C.**

物体検出**D.** 光学式文字認識 (OCR) **Answer: C**Explanation:ExplanationObject detection is similar to tagging, but the API returns the bounding box coordinates (in pixels) for each object found. For example, if an image contains a dog, cat and person, the Detect operation will list those objects together with their coordinates in the image. You can use this functionality to process the relationships between the objects in an image. It also lets you determine whether there are multiple instances of the same tag in an image.The Detect API applies tags based on the objects or living things identified in the image. There is currently no formal relationship between the tagging taxonomy and the object detection taxonomy. At a conceptual level, the Detect API only finds objects and living things, while the Tag API can also include contextual terms like "indoor", which can't be localized with bounding boxes.Reference:
