**NEW QUESTION: 2**In response to the needs of a specific customer, you create a group in Unified Service Manager (USM) with 600 servers. The group is populated with some baseline Monitoring Configuration Service (MCS) profiles for the cdm and processes probes. However, the customer subsequently tells you that 10 of the 600 servers require slightly different thresholds. Which action do you recommend?**A.** Create another group for these servers, with MCS profiles with different thresholds and the same priority.**B.** Use the Admin Console or Infrastructure Manager to override the monitoring configuration directly on the probes for the 10 servers.**C.** Create another USM group for the 10 servers with the profiles copied from the baseline group and create new profiles with a higher priority to override.**D.** For each of the 10 servers, put the servers into maintenance.**Answer: D**

**NEW QUESTION: 3****CORRECT TEXT**Scenario Given the new additional connectivity requirements and the topology diagram, use ASDM to accomplish the required ASA configurations to meet the requirements.  
New additional connectivity requirements: Once the correct ASA configurations have been configured: To access ASDM, click the ASA icon in the topology diagram. To access the Firefox Browser on the Outside PC, click the Outside PC icon in the topology diagram. To access the Command prompt on the Inside PC, click the Inside PC icon in the topology diagram.  
Note: After you make the configuration changes in ASDM, remember to click Apply to apply the configuration changes. Not all ASDM screens are enabled in this simulation, if some screen is not enabled, try to use different methods to configure the ASA to meet the requirements. In this simulation, some of the ASDM screens may not look and function exactly like the real ASDM.**Answer:** Explanation: Follow the explanation part to get answer on this sim question.  
Explanation: First, for the HTTP access we need to create a NAT object. Here I called it HTTP but it can be given any name. Then, create the firewall rules to allow the HTTP access: You can verify using the outside PC to HTTP into 209.165.201.30. For step two, to be able to ping hosts on the outside, we edit the last service policy shown below: And then check the ICMP box only as shown below, then hit Apply. After that is done, we can ping www.cisco.com again to verify:
