NEW QUESTION: 3DRAG DROP**Answer:** Explanation:Explanation:Granting a user Full Control NTFS permission on a folder enables that user to take ownership of the folder unless the user is restricted in some other way. Be cautious in granting Full Control. If you want to manage folder access by using NTFS permissions exclusively, set share permissions to Full Control for the Everyone group. NTFS permissions affect access both locally and remotely. NTFS permissions apply regardless of protocol. Share permissions, by contrast, apply only to network shares. Share permissions do not restrict access to any local user, or to any terminal server user, of the computer on which you have set share permissions. Thus, share permissions do not provide privacy between users on a computer used by several users, nor on a terminal server accessed by several users.
