Our testbells 500-420 - Cisco AppDynamics Associate Performance Analyst Beta exam material is guaranteed that will help you in getting certified, On the one hand, by the free trial services you can get close contact with our products, learn about our 500-420 study guide, and know how to choose the most suitable version.

NEW QUESTION: 1 A user has created a subnet in VPC and launched an EC2 instance within it. The user has not selected the option to assign the IP address while launching the instance. The user has 3 elastic IPs and is trying to assign one of the Elastic IPs to the VPC instance from the console. The console does not show any instance in the IP assignment screen. What is a possible reason that the instance is unavailable in the assigned IP console?
A. The user has not created an internet gateway
B. The IP address may be attached to one of the instances
C. The IP addresses belong to EC2 Classic; so they cannot be assigned to VPC
D. The IP address belongs to a different zone than the subnet zone
Answer: C
Explanation: A Virtual Private Cloud (VPC) is a virtual network dedicated to the user's AWS account. A user can create a subnet with VPC and launch instances inside that subnet. When the user is launching an instance he needs to select an option which attaches a public IP to the instance. If the user has not selected the option to attach the public IP then it will only have a private IP when launched. If the user wants to connect to an instance from the internet he should create an elastic IP with VPC. If the elastic IP is a part of EC2 Classic it cannot be assigned to a VPC instance.

NEW QUESTION: 2 Identify two reference types used to tie a receipt trade operation to an expense invoice for landing
A. Shipment number
B. Internal requisition number
C. Expense invoice number
D. Receipt number
E. Bill of Lading
Answer: A, B

NEW QUESTION: 3 Your network contains an Active Directory domain named contoso.com. All domain controllers are DNS servers and host Active Directory integrated zones (or the domain). The zone allows secure and non-secure dynamic update. The domain contains several DHCP servers. You plan to deploy 200 Linux computers. The name of each computer will be registered in the contoso.com DNS zone. The computers will receive their IP configuration from the DHCP server. You need to protect the DNS records of the Linux servers from being overwritten accidentally by another server that has the same name. The Linux servers must be prevented from registering in DNS directly. What should you do? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.
Answer: Explanation:
