NEW QUESTION: 1 Studies indicate that the demand for fresh tomatoes is much more elastic than the demand for salt. These findings reflect that **A.** it takes longer for consumers to adjust to a change in the price of salt than to a change in the price of tomatoes. **B.** more good substitutes exist for fresh tomatoes than for salt. **C.** tomatoes are a necessity while salt is a luxury. **Answer: B**
Explanation: The presence of substitutes for a good raises the elasticity of the good. This is because under a price increase for tomatoes, consumers will switch to other vegetables that are now relatively lower priced. There are few good substitutes for salt and therefore the price elasticity of salt is much lower than that for tomatoes.
