**NEW QUESTION: 3** Sie haben eine Ressourcengruppe mit dem Namen RG1. RG1 enthält ein Azure-Speicherkonto mit dem Namen storageaccount1 und eine virtuelle Maschine mit dem Namen VM1, auf der Windows Server 2016 ausgeführt wird. Storageaccount1 enthält die Festplattendateien für VM1. Sie wenden eine ReadOnly-Sperre auf RG1 an. Was können Sie über das Azure-Portal tun?**A.** Laden Sie einen Blob auf storageaccount1 hoch.**B.** Generieren Sie ein Automatisierungsskript für RG1.**C.** Starten Sie VM1.**D.** Zeigen Sie die Schlüssel von storageaccount1 an.**Answer: A**  
Explanation:ExplanationApplying locks can lead to unexpected results because some operations that don't seem to modify the resource actually require actions that are blocked by the lock. Locks are inherited to all of its resources if it applies on resource group level.Upload a blob to storageaccount1 is possible if we have readonly lock on RG1 since we are trying to modify the data not resource properties.When a R/O lock is put on a resource, you lock it's properties not the resource. So while a read only lock is present on a storage account(inherited from a resource group), a file can still be uploaded to the already existing container of a storage account.
