The results show that our C_THR95_2311 study materials are easy for them to understand, So please trust us, and we will not let you down, All questions are related to the SAP Certified Application Associate field.

Our C_THR95_2311 study tool can help you pass the exam, How it can be so precise, Generally, the companies offer complex mediums for the C_THR95_2311 exam preparation materials, but we at Photoexperienceacademy offer the PDF version of solved question and answers to the customers so that they can use it for instant commencement of C_THR95_2311 exam preparation.

NEW QUESTION: 1 Which of the following is not a standard, but it is made up of a collection of interface standards covering a range of peripheral devices, including hard disks, tape drives, optical drives, and disk arrays?**A.** EIDE**B.** IDE**C.** SCSI**D.** Serial ATA**Answer: C**

NEW QUESTION: 2 Your network contains four Network Policy Server (NPS) servers named Server1, Server2, Servers, and Server4.Server1 is configured as a RADIUS proxy that forwards connection requests to a remote RADIUS server group named Group1.You need to ensure that Server2 and Server3 receive connection requests. Server4 must only receive connection requests if both Server2 and Server3 are unavailable.How should you configure Group1?**A.** Change the Weight of Server4 to 10.**B.** Change the Weight of Server2 and Server3 to 10.**C.** Change the Priority of Server2 and Server3 to 10.**D.** Change the Priority of Server4 to 10.
Answer: D Explanation:During the NPS proxy configuration process, you can create remote RADIUS server groups and then add RADIUS servers to each group. To configure load balancing, you must have more than one RADIUS server per remote RADIUS server group. While adding group members, or after creating a RADIUS server as a group member, you can access the Add RADIUS server dialog box to configure the following items on the Load Balancing tab:Priority. Priority specifies the order of importance of the RADIUS server to the NPS proxy server. Priority level must be assigned a value that is an integer, such as 1, 2, or 3. The lower the number, the higher priority the NPS proxy gives to the RADIUS server. For example, if the RADIUS server is assigned the highest priority of 1, the NPS proxy sends connection requests to the RADIUS server first; if servers with priority 1 are not available, NPS then sends connection requests to RADIUS servers with priority 2, and so on. You can assign the same priority to multiple RADIUS servers, and then use the Weight setting to load balance between them.Weight. NPS uses this

Weight setting to determine how many connection requests to send to each group member when the group members have the same priority level. Weight setting must be assigned a value between 1 and 100, and the value represents a percentage of 100 percent. For example, if the remote RADIUS server group contains two members that both have a priority level of 1 and a weight rating of 50, the NPS proxy forwards 50 percent of the connection requests to each RADIUS server.Advanced settings. These failover settingsprovide a way for NPS to determine whether the remote RADIUS server is unavailable. If NPS determines that a RADIUS server is unavailable, it can start sending connection requests to other group members. With these settings you can configure the number of seconds that the NPS proxy waits for a response from the RADIUS server before it considers the request dropped; the maximum number of dropped requests before the NPS proxy identifies the RADIUS server as unavailable; and the number of seconds that can elapse between requests before the NPS proxy identifies the RADIUS server as unavailable.The default priority is 1 and can be changed from 1 to 65535. So changing server 2 and 3 to priority 10 is not the way to go.Reference: http: //technet. microsoft. com/en-us/library/dd197433(WS. 10). aspx

NEW QUESTION: 3 Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com that contains a user named User1.You suspect that an imposter is signing in to Azure AD by using the credentials of User1.You need to ensure that an administrator named Admin1 can view all the sign in details of User 1 from the past 24 hours.To which three roles should you add Admin1? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.**A.** Compliance administrator**B.** Reports reader **C.** User administrator**D.** Security Reader**E.** Password administrator**F.** Security administrator **Answer: B,D,F**Explanation:ExplanationUsers in the Security Administrator, Security Reader, Global Reader, and Report Reader roles can view the sign in details.Reference: https://docs.microsoft.com/en-us/azure/active-directory/reports-monitoring/concept-sign-ins

NEW QUESTION: 4 Which two statements concerning Brocade ISL trunking on the Brocade VDX 6720-24 and VDX6720-60 platforms are true? (Choose two.)**A.** By default, ISL trunking between VCS Fabric enabled switches is automatic.**B.** No separate licensing is required for ISL trunking. **C.** A maximum of 16 ports can be members of a Brocade ISL trunk per switch.**D.** Brocade LAGs are Brocade trunks and do not require user configuration.**Answer: A,B**
