**NEW QUESTION: 1** Which is not a valid reason for poor Cloud Bigtable performance?  
**A.** The table's schema is not designed correctly.  
**B.** The Cloud Bigtable cluster has too many nodes.  
**C.** The workload isn't appropriate for Cloud Bigtable.  
**D.** There are issues with the network connection.  
**Answer: B**  
**Explanation:** The Cloud Bigtable cluster doesn't have enough nodes. If your Cloud Bigtable cluster is overloaded, adding more nodes can improve performance. Use the monitoring tools to check whether the cluster is overloaded.

**NEW QUESTION: 2** You administer a Microsoft SQL Server database server. One of the databases on the server supports a highly active OLTP application. Users report abnormally long wait times when they submit data into the application. You need to identify which queries are taking longer than 1 second to run over an extended period of time. What should you do?  
**A.** Run the DBCC TRACEON 1222 command from a query window and review the SQL Server event log.  
**B.** Use the Job Activity monitor to review all processes that are actively running. Review the Job History to find out the duration of each step.  
**C.** Use sp\_configure to set a value for blocked process threshold. Create an extended event session.  
**D.** Run the sp\_who command from a query window.  
**E.** use SQL Profiler to trace all queries that are processing on the server. Filter queries that have a Duration value of more than 1,000.  
**Answer: E**  
**Explanation:** Explanation Use SQL Profiler to trace all queries that are processing on the server. Filter queries that have a Duration value of more than 1,000.  
**Incorrect:** Not B: The SQL Server lock monitor is responsible for implementing the logic to detect a blocking scenario if the 'blocked process threshold' value is greater than 0. However, the lock monitor only wakes up every 5 seconds to detect this condition (it is also looking for other conditions such as deadlocks). Therefore, if you set a 'blocked process threshold' value to 1, it will not detect a process that has been blocking for 1 second. The minimum time it can detect a blocked process is 5 seconds.  
**Not E:** The Traceflag 1222 Shows Deadlocks, not the Duration of an query.
