Within last few years, traditional software development has **Latest C-SEN-2305 Demo** undergone radical changes in each and every aspect of this model so as to cope with the dynamic business landscape.

For example, the function to stimulate the exam helps the clients test their learning results of the C-SEN-2305 learning dump in an environment which is highly similar to the real exam.

NEW QUESTION: 1You have a Windows PowerShell script that contains the following code:

```
import-csv Accounts.csv | Foreach {New-ADUser -Name $_.Name -Enabled $true  
-AccountPassword $_.password}
```

When you run the script, you receive an error message indicating that the format of the password is incorrect. The script fails. You need to run a script that successfully creates the user accounts by using the password contained in accounts.csv.

Which script should you run?

A. `import-csv Accounts.csv | Foreach {New-ADUser -Name`

`$_Name -Enabled $true - AccountPassword(Read-Host -AsSecureString $_.Password)}`

B. `import-csv Accounts.csv | Foreach {New-ADUser -Name`

`$_Name -Enabled $true - AccountPassword(ConvertTo-SecureString "Password" -AsPlainText -force)}`

C. `import-csv Accounts.csv | Foreach {New-ADUser -Name`

`$_Name -Enabled $true - AccountPassword(ConvertTo-SecureString $_.Password -AsPlainText -force)}`

D. `import-csv Accounts.csv | Foreach {New-ADUser -Name`

`$_Name -Enabled $true - AccountPassword(Read-Host -AsSecureString "Password")}`

Answer: C Explanation: `import-csv Accounts.csv | Foreach { New-ADUser -Name $_.Name -Enabled $true - AccountPassword (ConvertTo-SecureString $_.Password -AsPlainText -force)}` Personal comment: import comma separated values file (most probably containing a column for Name and one for Password) for each line of values create a new AD user with the name contained in the Name column enable the account and set the password with the value contained in the Password column; import the password from plain text as a secure string and ignore warnings/errors

<http://technet.microsoft.com/en-us/library/hh849818.aspx> `ConvertTo-SecureStringParameters -AsPlainText` Specifies a plain text string to convert to a secure string. The secure string cmdlets help protect confidential text. The text is encrypted for privacy and is deleted from computer memory after it is used. If you use this parameter to provide plain text as input, the system cannot protect that input in this manner. To use this parameter, you must also specify the `Force` parameter. `-Force` Confirms that you understand the implications of using the `AsPlainText` parameter and still want to use it.

NEW QUESTION: 2Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You use `dplyrXdf`, and you discover that after you exit the session, the output files that were created were deleted. You need to prevent the files from being deleted.

Solution: You use `dplyrXdf` with the `persist` verb. Does this meet the goal?

A. Yes **B.** No **Answer: A** Explanation: Explanation/Reference:

Explanation: References:
