After you really improve your strength, you will find that your **N10-009 Latest Torrent** strength can bring you many benefits, Wrong practice materials will upset your pace of review, which is undesirable.

NEW QUESTION: 1The Archibald Corporation has offices in thirteen countries besides the United States. In these foreign offices, the management positions are held by locals and the corporate positions are held by Americans. What is one possible drawback of this arrangement?
A. Resentment by the foreign community
B. Organizational culture is too homogenous
C. Exaggerated hiring costs
D. Lack of communication among the foreign offices
Answer: D
Explanation:Explanation: One possible drawback of this arrangement is a lack of communication among the foreign offices. The Archibald Corporation is using what is known as the polycentric approach to international staffing. The advantages to this system are that it is cheaper to employ foreign nationals than to use expatriates and that it gives the foreign community a sense of investment in the business. However, if a corporation has multiple overseas offices, linguistic and cultural barriers may impede communication among them.

NEW QUESTION: 2Your network contains an Active Directory domain named contoso.com. The domain contains a domain controller named dcl.contoso.com You discover that the Default Domain Policy Group Policy objects (GPOs) and the Default Domain Controllers Policy GPOs were deleted. You need to recover the Default Domain Policy and the Default Domain Controllers Policy GPOs. What should you run?
A. dcgpofix.exe /target:domain
B. dcgpofix.exe /target:both
C. gptfixup.exe /oldnb:contoso /newnb:dc1
D. gpfixup.exe /dc:dc1.contoso.com
Answer: B
Explanation:[http://technet.microsoft.com/en-us/library/hh875588\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/hh875588(v=ws.10).aspx)

NEW QUESTION: 3You have an Azure subscription that contains a virtual machine scale set. The scale set contains four instances that have the following configurations:
* Operating system: Windows Server 2016
* Size: Standard_D1_v2
You run the get-azvmss cmdlet as shown in the following exhibit: Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.
NOTE: Each correct selection is worth one point.
Answer: Explanation:Explanation The Get-AzVmssVM cmdlet gets the model view and instance view of a Virtual Machine Scale Set (VMSS) virtual machine.
Box 1: 0 The enableAutomaticUpdates parameter is set to false. To update existing VMs, you must do a manual upgrade of each existing VM.
Box 2: 4 Enabling automatic OS image upgrades on your scale set helps ease update management by safely and automatically upgrading the OS disk for

all instances in the scale set. Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/virtual-machine-scale-sets-upgrade-scale-set>

<https://docs.microsoft.com/en-us/azure/virtual-machine-scale-sets/virtual-machine-scale-sets-automatic-upgrade>

NEW QUESTION: 4 Which of the following implementation steps would be appropriate for a public wireless hot-spot?
A. Open system authentication
B. MAC filter
C. Disable SSID broadcast
D. Reduce power level
Answer: A
Explanation: For a public wireless hot-spot, you want members of the public to be able to access the wireless network without having to provide them with a password. Therefore, Open System Authentication is the best solution. Open System Authentication (OSA) is a process by which a computer can gain access to a wireless network that uses the Wired Equivalent Privacy (WEP) protocol. With OSA, a computer equipped with a wireless modem can access any WEP network and receive files that are not encrypted. For OSA to work, the service set identifier (SSID) of the computer should match the SSID of the wireless access point. The SSID is a sequence of characters that uniquely names a wireless local area network (WLAN). The process occurs in three steps. First, the computer sends a request for authentication to the access point. Then the access point generates an authentication code, usually at random, intended for use only during that session. Finally, the computer accepts the authentication code and becomes part of the network as long as the session continues and the computer remains within range of the original access point. If it is necessary to exchange encrypted data between a WEP network access point and a wireless-equipped computer, a stronger authentication process called Shared Key Authentication (SKA) is required.
